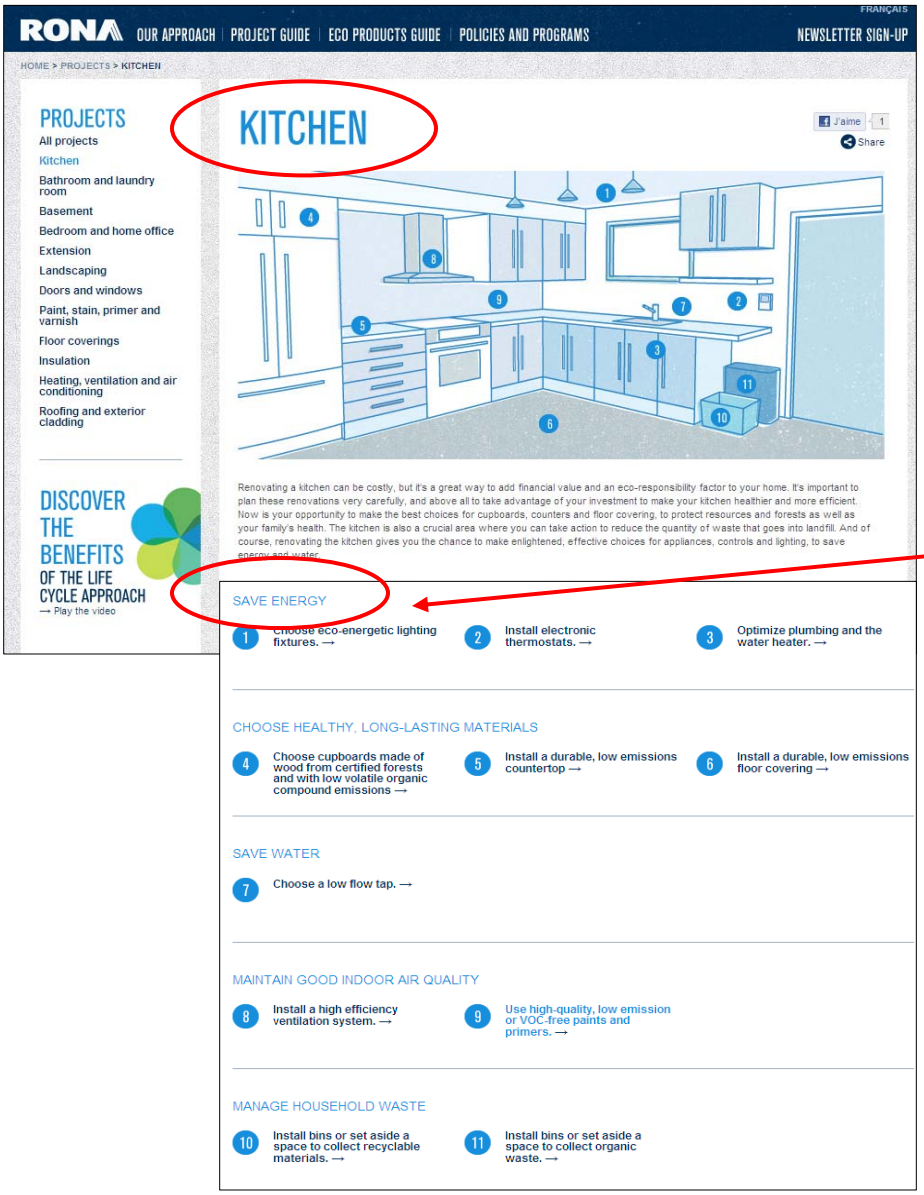
NAVIGATION GUIDE
RONA'S ECO-RESPONSIBLE RENOVATION GUIDE
www.rona-eco.ca

The site is divided into two main sections: projects and products. You can therefore choose to search by PROJECTS or by PRODUCTS.

If you search by PROJECTS, you will have access to a range of eco-responsible renovation projects.

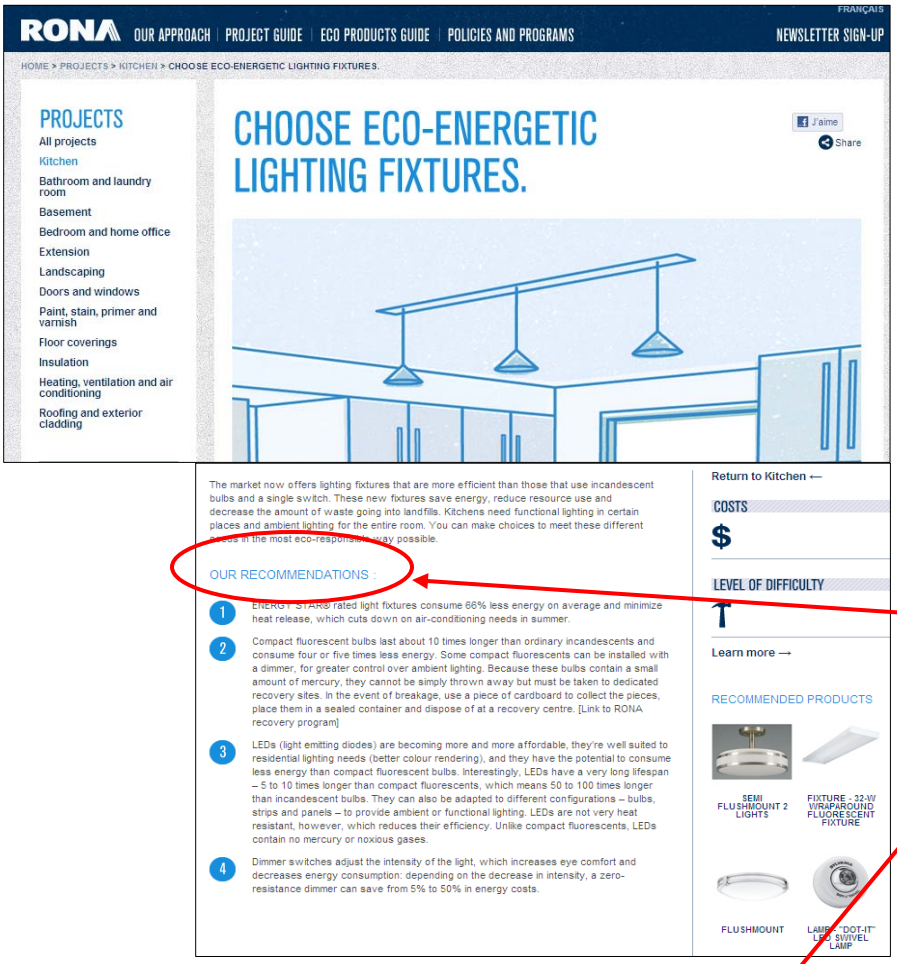
Click here to learn more about the Life Cycle Approach.

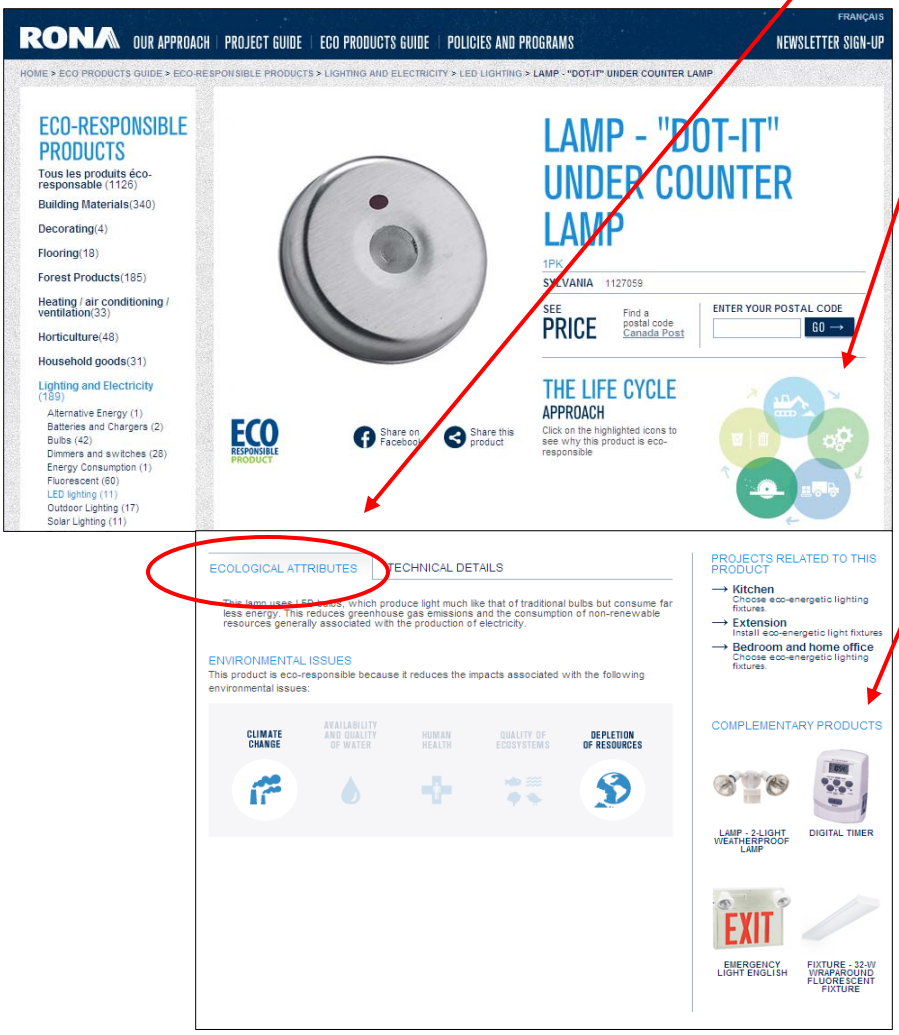


In the case of a KITCHEN, for instance, a click of a mouse gives access to numerous eco-responsible renovation options, along with an analysis of their environmental advantages.

Users are also able to make choices for the environmental aspect they want to focus on more: save energy, choose healthy, long-lasting materials, save water, maintain good indoor air quality, manage household waste.

Some environmental aspect choices have more than one option. For instance, you can select from several energy-saving options, such as eco-energetic lightning fixtures.





Selecting an environmental aspect choice will instantly provide you with an explanation of the eco-responsible options available for this specific category as well as products recommendations.

Every product comes with a fact sheet that sets out in detail its features and advantages across the five stages of its life cycle: resource acquisition, manufacturing, packaging and transportation, use, and end of life. This is measured against five environmental issues recognized by the international scientific community: climate change, availability and quality of water, human health, quality of ecosystems, and depletion of resources.
