

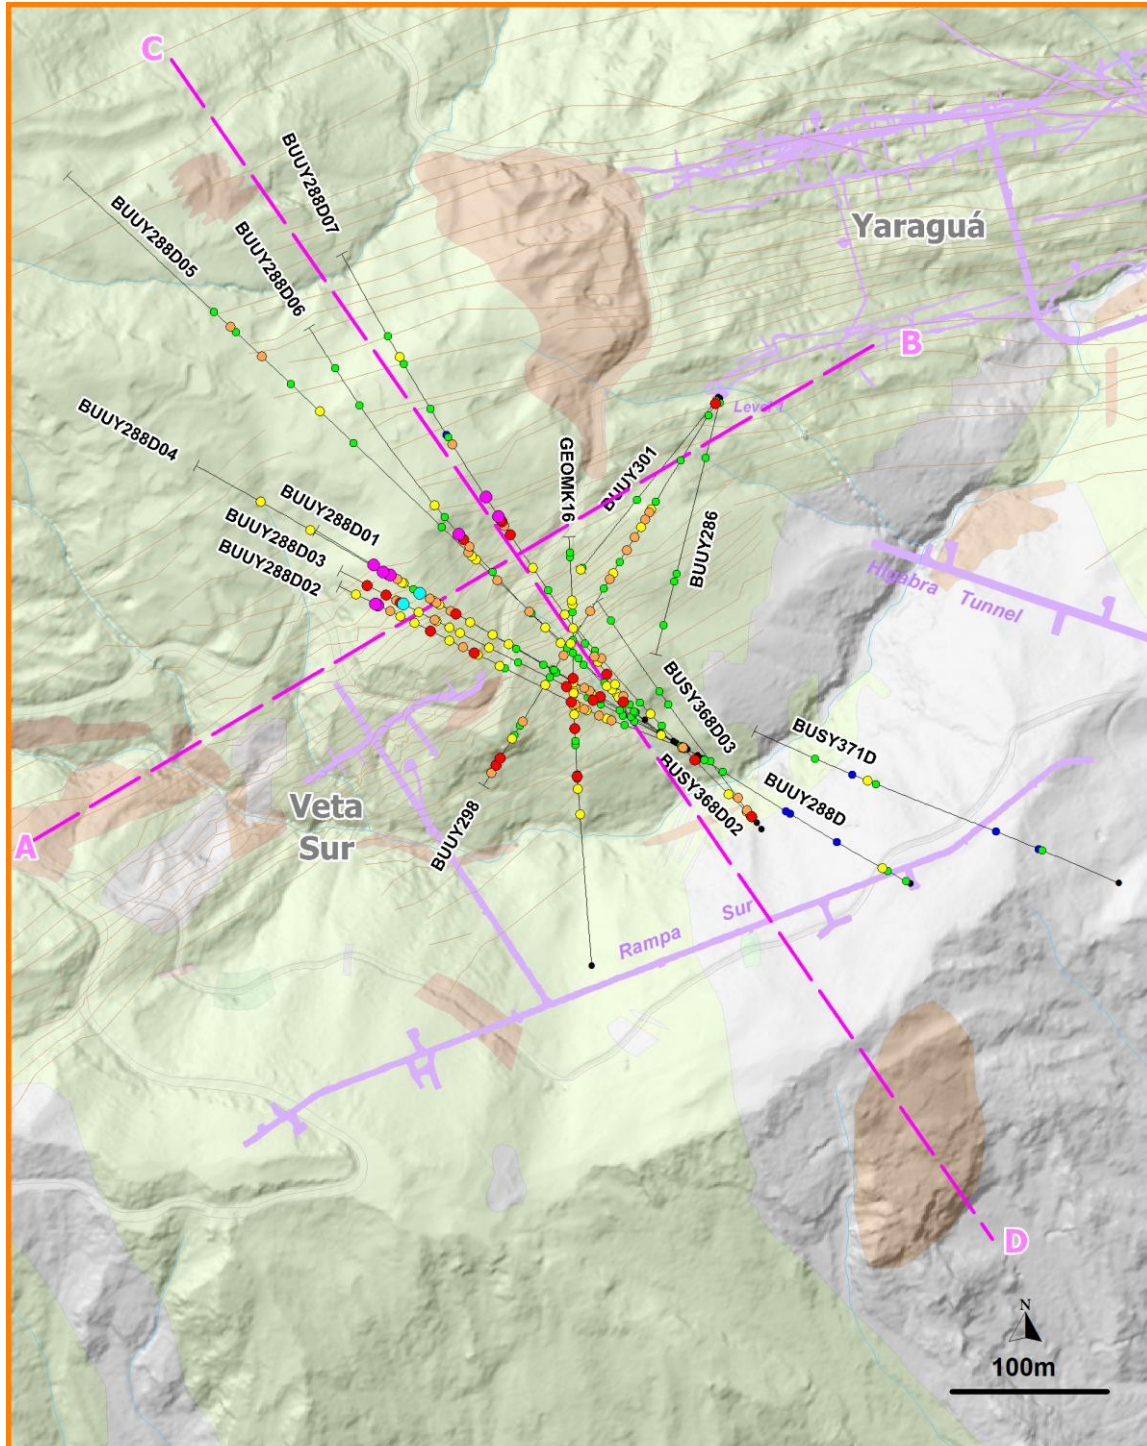

Figure 1 – Plan view of highlights of new drilling in eastern Veta Sur and western Yaraguá showing the surface projection of veins in the current (2014) Buriticá mineral resource model on geology-topography. Line A-B refers to the cross-section line for Figure 2, and line C-D refers to the long section line for Figure 3.

Drilling	Geology	Gold (g/t)
Drill hole (this release)	Andesite	> 100
Model Vein	Breccia 1	30 - 100
Road	Breccia 2	10 - 30
Drainage	Sediments	5 - 10
Development	Volcanics	3 - 5
		1 - 3
