

Multiple Operations Box (MOB) Fact Sheet:

Re: Pelican™ Products Canada Awarded Multi-Million Dollar Contract.

Details:

Throughout the 25 plus years that Pelican has been doing business with the Canadian Forces, it has supplied them with a myriad of Pelican Protector Cases for a number of uses: weapons transport, medical supplies, electronics and documents to name a few. From our Micro Cases to our largest 1780 weapons transport case, Pelican has provided protection and transport cases to nearly every facet of the Canadian Military environment. This also included Pelican Safety Lights for aircraft inspection, personnel lights and tactical needs.

The Pelican 1630, just like the Multiple-Operations Box (MOB), is built tough to withstand severe impacts without harming your valuable equipment. An o-ring seal locks out dust and moisture while the Automatic Pressure Equalization Valve allows the passing of air molecules to ensure that even after changes in altitude or air pressure you'll easily be able to open your case. The extendable handle, transport wheels, and a variety of interior options such as lid organizers, padded dividers or customizable foam make the Pelican 1630 Case a versatile and effective transport case.

Contract Details:

- **Contract Parties:** Department of National Defence (DND) and Pelican Products, Inc. (Canada)

- Dustproof and waterproof
- Reinforced stainless steel lock hasps
- Increased storage capacity, to accommodate the soldiers Operational and follow on equipment
- 25 year warranty, including operational military use

Pelican History:

From an old dirt floor in a garage and shoestring budget; Pelican Products came into existence. Founder Dave Parker had a desire to develop unique and practical products for the dive market. Through his diving experience he discovered that certain things were needed to make a dive complete which were simply not available, and he figured other must divers need them too. The Pelican Float was its first product and patent into the Dive industry and Pelican has since been developing products for over 30 solid years into a wide variety of industries.

Pelican was later developed into a multi-product, multi-industry company with a complete line of submersible and waterproof safety approved flashlights and equipment Protector™ cases. Pelican is a growing strong ISO 9001:2000 certified manufacturing and design corporation with over 500 employees worldwide.

In the year 2000, the Pelican Products Inc. (Canada) head office in Edmonton, AB was formed to develop a truly national presence where Pelican lights and cases could be introduced to every industry in Canada. From Law Enforcement to Communications, Medicine to Outdoor Sports, and our traditional participation in the Industrial, Dive, Fire & high tech industries, Pelican Canada has expanded its reach to virtually all markets. After all, everyone needs a Pelican!

Pelican Canada offers the best of all worlds: great products, a successful history and above all, great people.
