

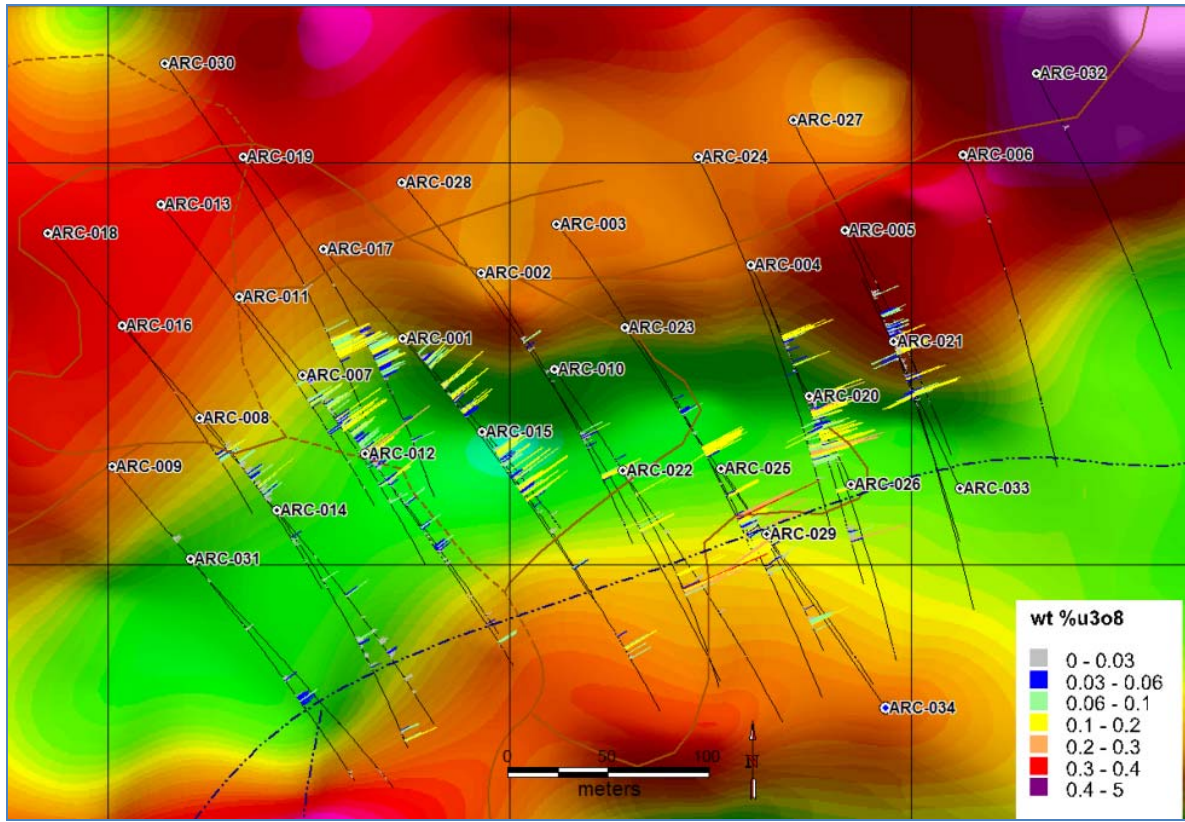

Figure 2 – Drill Hole Locations at Aricheng C

Plan view of the location of the 34 bore holes (results reported in this press release are for bore holes ARC-011 to ARC-034) drilled on the Aricheng C structure shown on a map of ground magnetic data (cool colours – green and yellow – mark least magnetic areas while warm colours – orange and red – mark areas of more intense magnetism). The collar position of each hole is shown as a dot and the extent of each inclined hole is shown as a black line. U₃O₈ grade (%) is shown as a histogram along the trace of the bore hole.
