

Figure 3. One of several cross sections of drilling by Africwest shows strong gold-bearing intercepts over a mineralized zone with true widths of up to 60 m. The mineralized zone is open in all directions. Intervals indicated are calculated by Abzu based on data provided by Red Back. **Please note that these data are historic in nature and have not been reviewed or verified by a Qualified Person (QP), nor has any QP evaluated Quality Assurance/Quality Control practices that might have been undertaken by Africwest at the time of drilling. Abzu wishes to drill at this location, in part, to assess the validity of these reported data.**
