

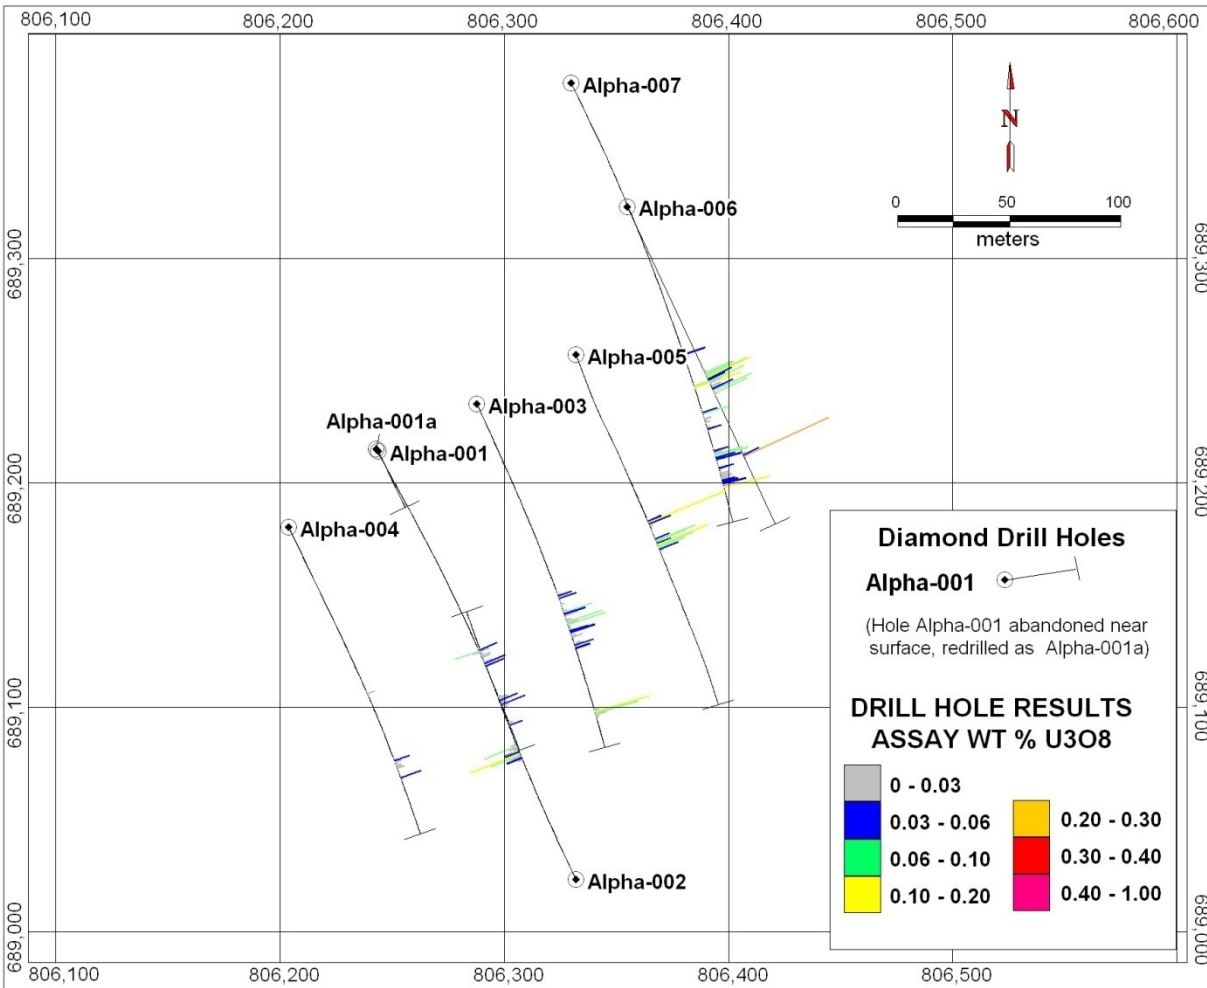

Figure 3 –Drill Hole Locations at Aricheng Alpha

Plan view of the location of the seven Phase I bore holes drilled at Aricheng Alpha, whose results are reported in this press release. The collar position of each hole is shown as a dot and the extent of each inclined hole is shown as a black line. U₃O₈ grade (%) is shown as a histogram along the trace of the bore hole.

U3O8 Corp. identified the new Aricheng Alpha target based on VLF-EM anomalies coinciding with, or cutting across weakly magnetic zones.
