

Figure 1. Plan view of level 440 at the Chelopech Mine, showing the ore-body outlines as per the current grade control model, silica envelopes and level development. An initial interpretation of Zone 153 is presented.

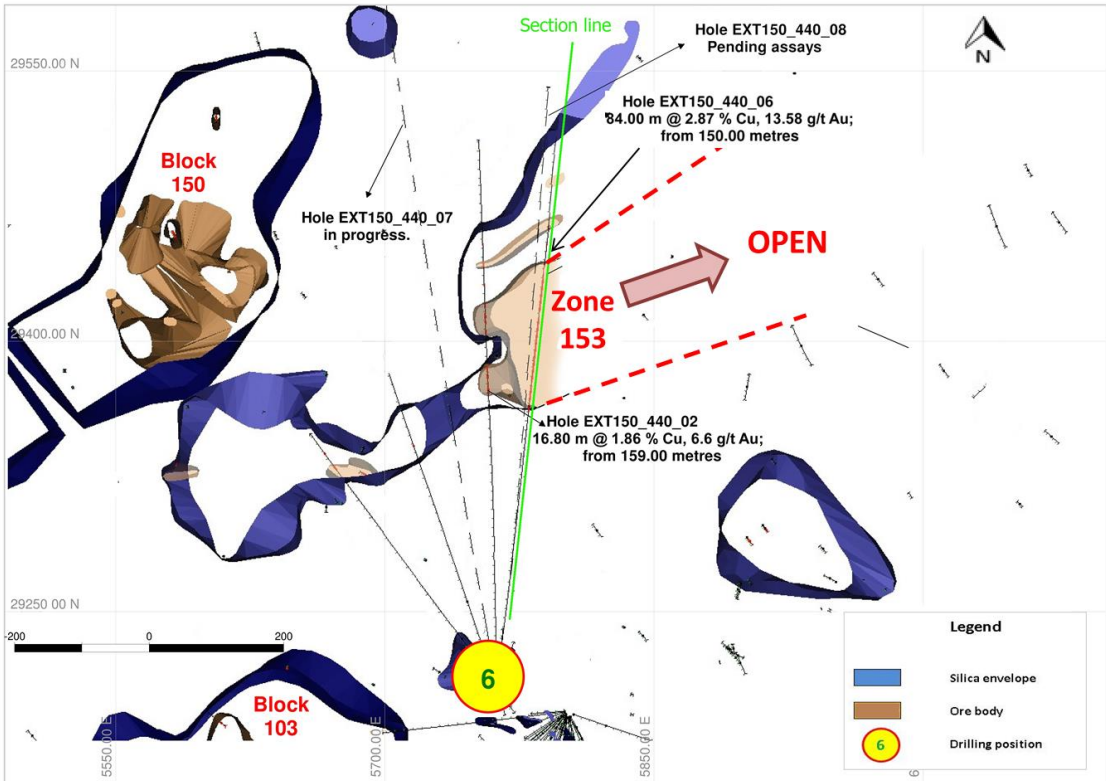

Figure 2. Plan view of current drilling position and location of Zone 153, outlined in the red box in the previous figure.

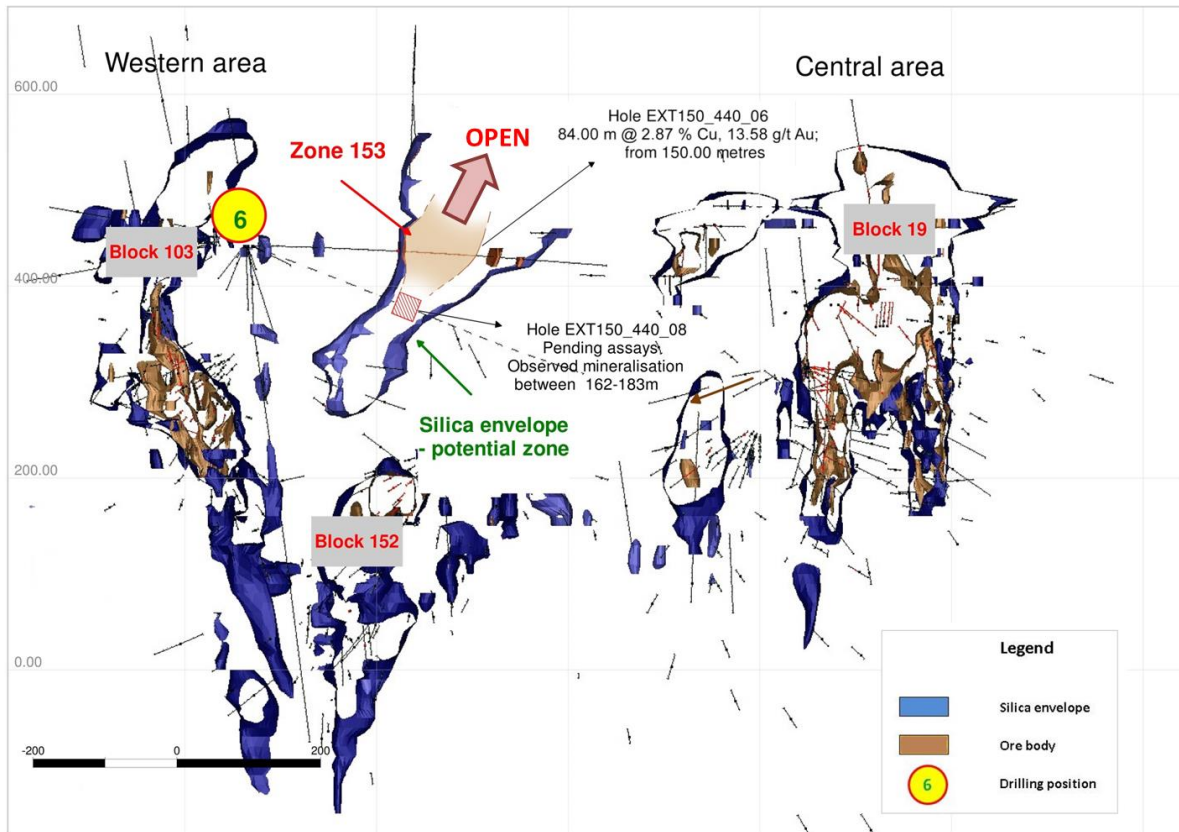

Figure 3. Cross section through the Chelopech Mine showing the location of the Zone 153 relative to the main mining blocks. The cross section is looking west. The section axis is shown on figure 2.
