

Exhibit 1: High-level summary of exploration activities undertaken during the 2014 field season in the central areas of our Bronze Fox license

Drilling collar map, background IP chargeability at 500 meters depth

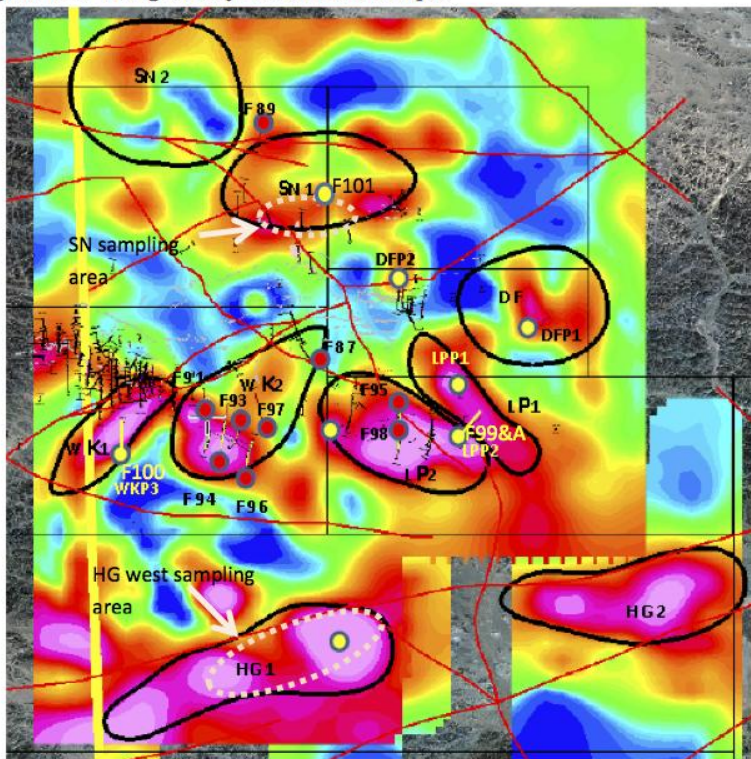

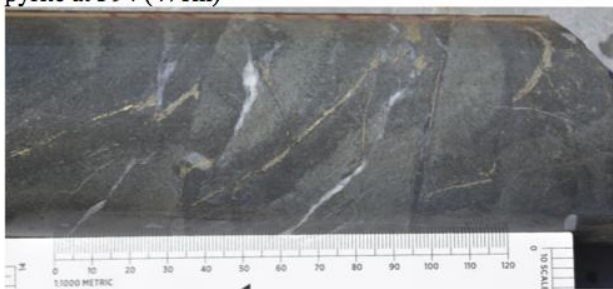

Exhibit 2: All holes in 2014 have intersected varying degrees of sulfides. Results this season, as per previous, illustrate that geophysics (IP and magnetics) are an effective tool for identifying the target areas and prospective mineralized systems

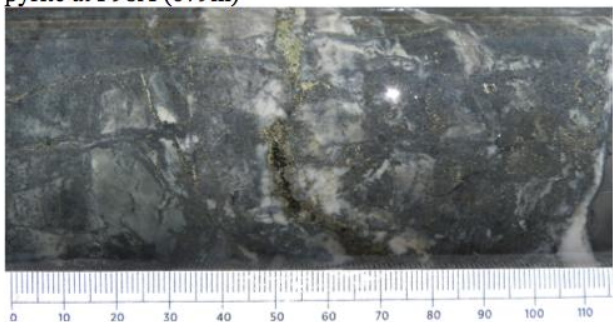

Alteration, veining, and disseminate chalcopyrite and pyrite at F94 (471m)

Chalcopyrite and pyrite at F95 (1138m)

Alteration, veining, and disseminate chalcopyrite and pyrite at F98A (679m)

Alteration and different generation of chalcopyrite veins in F98A (628m)
