

Fig. 1: Diagrammatic representation of the Handeni Gold PL areas with previously drilled targets Kwandege (purple) and Magambazi East (blue) outlined. The positions of Target 5 (red) and Target 6 (green) are also indicated, both located on PL6779.

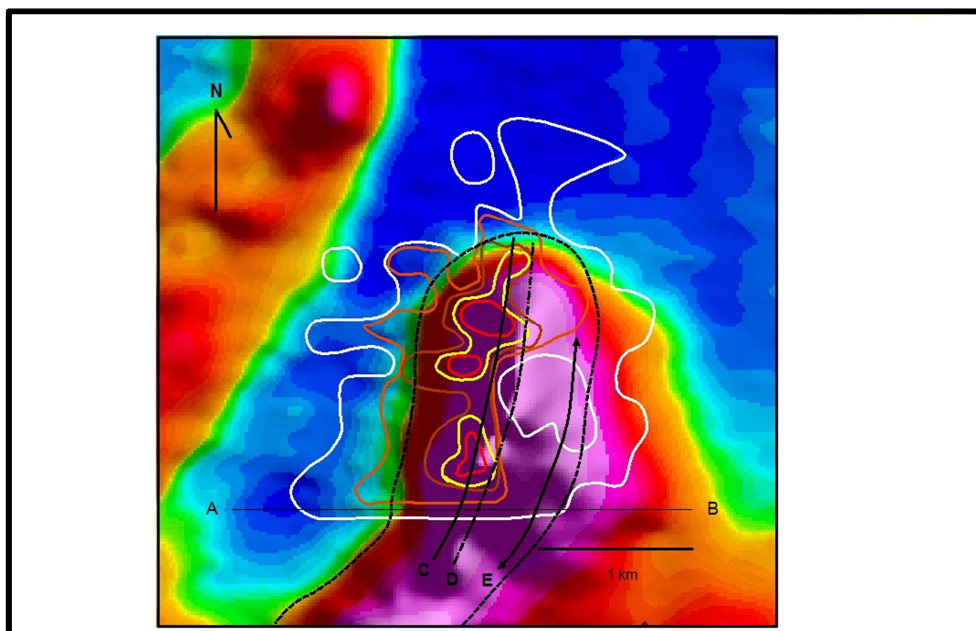

Fig. 2: Au assay results contoured on the geophysical anomaly of Target 5. Contours are (white (10 ppb), Orange (30 ppb), Brown (65 ppb), Yellow (115 ppb) and Red (160 ppb)). Soil samples south of line A-B not taken. Lines C, D and E are the shallow, intermediate and deep level axis of an apparently East to Southeast dipping geophysical anomaly.
