

NovaGold Resources Inc.

Proven and Probable Reserves, Measured, Indicated and Inferred Resources for Gold (Au), Silver (Ag), Copper (Cu), Zinc (Zn) and Lead (Pb)

As at June 1, 2010

## Reserves

Property % Ownership	Reserve Category	Tonnes Millions	In Situ Grade					Total Contained Metal					NovaGold Share			Net After Earn-Ins

**Notes:**

1. These reserve and resource estimates have been prepared in accordance with NI 43-101 and the CIM Definition Standards. See “Cautionary Note – Reserve and Resource Estimates”.
2. See numbered footnotes below on reserve and resource information. Reserves and resources shown in the right-hand columns are reported as net values to NovaGold.
3. AuEq - gold equivalent is calculated using gold and silver in the ratio of gold + silver ÷ (US\$847 Au ÷ US\$17 Ag), 2007–2009 average metal prices.
4. Sums may not agree due to rounding.

**Reserve and Resource Footnotes:**

- (1) The basis for the cut-off grade was an assumed gold price of US\$825/oz. The reserve and resource estimates for Donlin Creek are based on the technical report titled “Donlin Creek Gold Project, Alaska, USA, NI 43-101 Technical Report” dated April 1, 2009, a copy of which is available on SEDAR at [www.sedar.com](http://www.sedar.com) and on EDGAR at [www.sec.gov](http://www.sec.gov).
- (2) The basis for the cut-off grade was an assumed gold price of US\$500/oz. The reserve estimates for Rock Creek and Big Hurrah are based on the technical report titled “Technical Report, Rock Creek and Big Hurrah Project” dated February 21, 2008, a copy of which is available on SEDAR at [www.sedar.com](http://www.sedar.com) and on EDGAR at [www.sec.gov](http://www.sec.gov).
- (3) Mineral resources that are not mineral reserves do not have demonstrated economic viability. Inferred resources are in addition to measured and indicated resources. Inferred resources have a great amount of uncertainty as to their existence and whether they can be mined legally or economically. It cannot be assumed that all or any part of the inferred resources will ever be upgraded to a higher category. See “Cautionary Notes – Reserve and Resource Estimates”.
- (4) A variable cut-off grade has been estimated based on recent estimates of mining costs, processing costs (dependent upon sulfur content), selling costs and royalties. Resources are constrained within a Lerchs-Grossman (LG) open-pit shell using the long-term metal price assumption of US\$900/oz of gold. Assumptions for the LG shell included pit slopes variable by sector and pit area: mining cost is variable with depth, averaging US\$2.08/t mined; process cost is calculated as the percent sulfur grade x US\$2.7948 + US\$12.82; general and administrative costs, gold selling cost and sustaining capital are reflected on a per tonne basis. Based on metallurgical testing, gold recovery is assumed to be 89.5%. The reserve and resource estimates for Donlin Creek are based on the technical report titled “Donlin Creek Gold Project, Alaska, USA, NI 43-101 Technical Report” dated April 1, 2009, a copy of which is available on SEDAR at [www.sedar.com](http://www.sedar.com) and on EDGAR at [www.sec.gov](http://www.sec.gov).
- (5) The copper-equivalent grade was calculated as follows:  $CuEq = Recoverable\ Revenue \div 2204.62 \div US\$1.55 \div Cu\ Recovery$ . Where: CuEq = Copper equivalent grade; Recoverable Revenue = Revenue in U.S. dollars for recoverable copper, recoverable gold, and recoverable silver using metal prices of Cu US\$/lb = 1.550, Au US\$/oz = 650, Ag US\$/oz = 11. Cu Recovery = Recovery for copper based on mineral zone and total copper grade. The cut-off grade is based on assumptions of offsite concentrate and smelter charges and onsite plant recovery and is used for break-even mill feed/waste selection. The resource estimate for Galore Creek is based on the technical report titled “Galore Creek Property NI 43-101 Technical Report” dated January 25, 2008, a copy of which is available on SEDAR at [www.sedar.com](http://www.sedar.com) and on EDGAR at [www.sec.gov](http://www.sec.gov).
- (6) The copper equivalent grade was calculated as follows:  $CuEq = Recoverable\ Revenue \div 2204.62 * 100 \div 1.55$ . Where: CuEq = Copper equivalent grade; Recoverable Reserves = Revenue in US dollars for recoverable copper, recoverable gold and recoverable silver using metal prices of US\$1.55/lb, US\$650/oz, and US\$11/oz for copper, gold, and silver, respectively; Cu Recovery = 100% The resource estimate for Copper Canyon was updated in May 2010 by Erin Workman, P.Geo. and an employee of NovaGold Resources Inc., and has not been publicly released.
- (7) The basis for the cut-off grade was an assumed gold price of US\$950/oz. The resource estimate for Rock Creek was completed by Kevin Francis, P.Geo., a qualified person as defined by NI 43-101 and an employee of the Company. This resource estimate was disclosed in a NovaGold press release dated April 15, 2009, a copy of which is available on SEDAR at [www.sedar.com](http://www.sedar.com) and on EDGAR at [www.sec.gov](http://www.sec.gov).
- (8) The basis for the cut-off grade was an assumed gold price of US\$500/oz. The resource estimate for Big Hurrah is based on the technical report titled “Technical Report, Rock Creek and Big Hurrah Project” dated February 21, 2008, a copy of which is available on SEDAR at [www.sedar.com](http://www.sedar.com) and on EDGAR at [www.sec.gov](http://www.sec.gov).
- (9) US\$100 gross metal value/tonne cutoff. Gross metal value was calculated based on metal prices of Cu US\$2.25/lb, Zn US\$1.05/lb, Au US\$525/oz, Ag US\$9.5/oz and Pb US\$0.55/lb applied to each individual grade. The gross metal value is equal to the sum of each grade multiplied by the value of the metal unit. No metallurgical recovery has been applied. The resource estimate for the Arctic deposit is based on the technical report titled “NI 43-101 Technical Report on Resources, Ambler Project, Arctic Deposit” dated February 12, 2008 with an effective date of January 31, 2008, a copy of which is available on SEDAR at [www.sedar.com](http://www.sedar.com) and on EDGAR at [www.sec.gov](http://www.sec.gov).
- (10) Nome Gold resource is an alluvial deposit, which is reported in cubic meters rather than tonnes, and grams/cubic meter rather than grams/tonne. 85,000 ounces contained within the reported resources may be subject to a royalty. The resource estimate for Nome Gold is based on the technical report titled “Technical Report, Nome Placer Property” dated September 12, 2006, a copy of which is available on SEDAR at [www.sedar.com](http://www.sedar.com) and on EDGAR at [www.sec.gov](http://www.sec.gov).
