

Figure 2: Left: Geology of the Mrima Hill area sourced from MMAJ (1993). Right: Total Count radiometric data over the Mrima Hill region sourced from the TSL (1977) aerial Total Count Contour plan.

\*Note that the potential quantities and grades of the above TREO estimates are conceptual in nature, and there is insufficient exploration to date to define a current mineral resource and therefore it is uncertain if further exploration will result in the target being delineated as a current mineral resource. A “qualified person” as defined under National Instrument 43-101 has not completed sufficient work to classify the above mentioned historical estimate as a current mineral resource. The Company is not treating the historical estimate as a current mineral resource. The historical estimate is not compliant with NI 43-101 and should not be relied upon.
