

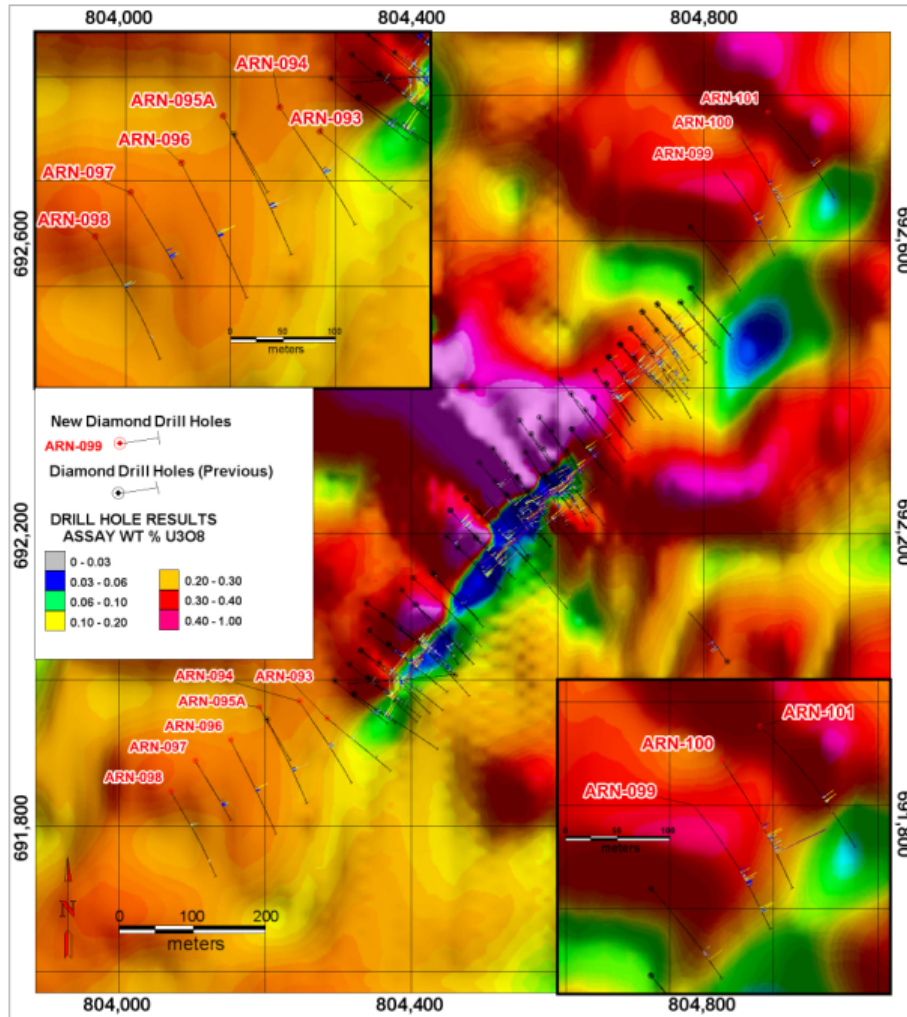

**Figure 2 – Drill Hole Locations at Aricheng North and Extensions**

Plan view of the location of the nine bore holes drilled in the scout drilling program on the extensions of the Aricheng North (results reported in this press release), which are labelled in red. The collar position of each hole is shown as a dot and the extent of each inclined hole is shown as a black line.  $U_3O_8$  grade (%) is shown as a histogram along the trace of the bore hole. The coloured background is ground magnetic data (cool colours represent the least magnetic areas while warm colours mark higher magnetism).
