

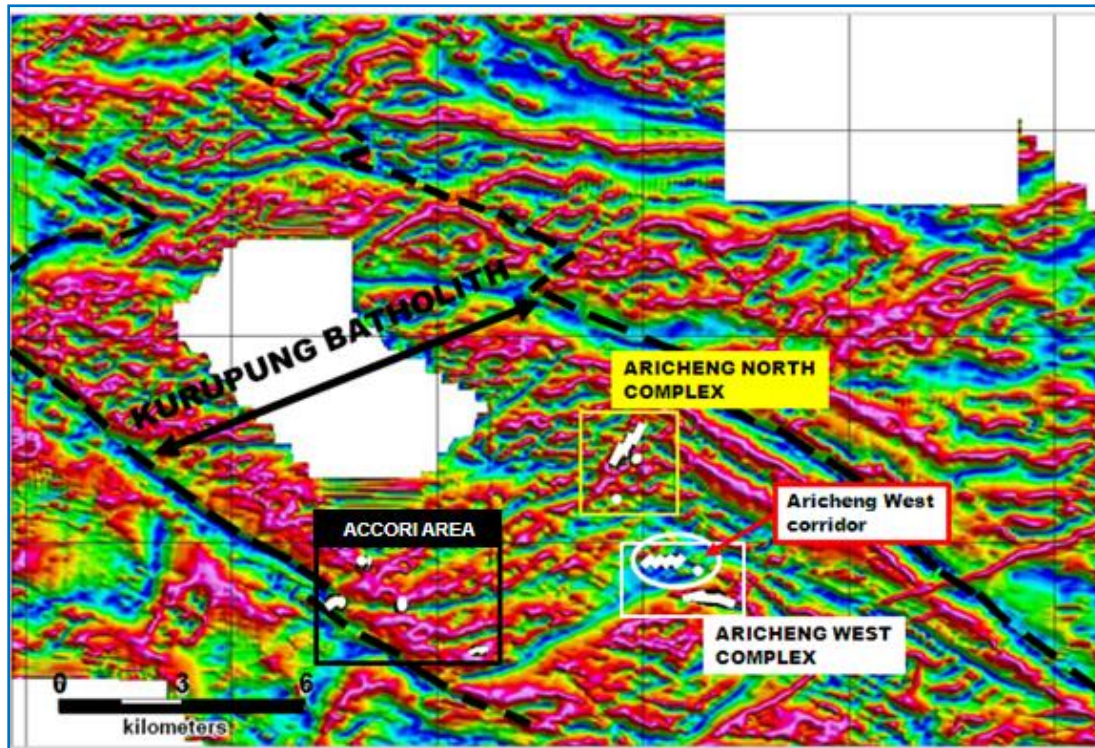

**Figure 1 – Multiple Uranium-Bearing Structures in the Kurupung Batholith**

Map of airborne magnetic data from the Kurupung area. The Kurupung Batholith lies between northwest trending bounding shear zones (black dashed lines). Cool colours (blue and green) represent rocks with poor magnetism while warm colours (pink, red, orange and yellow) represent magnetic rocks. Most uranium found by U308 Corp. to date lies within demagnetized faults (cool coloured areas).

The Aricheng West corridor (labeled in red) is located in the central part of an extensive area of weak magnetism in the Kurupung Batholith. White irregular areas show the footprints of uranium mineralization drilled by U308 Corp.
