SAN ANTONIO PROJECT 3D Perspective of gold-mineralized zones

This 3D perspective of the San Antonio gold-resource zone shows the a view of the bodies gold mineralization (red solids) after the 2010 drill program. Also shown is the open-pit design of AMEC's 2010 PA study. The intermediate zone has now been drilled on a 50-meter grid and a 400-meter long zone of gold mineralization has been identified.
