

Figure 1: Location of the Korkan-Bigar and Kraku Pestar target areas within the 20 kilometer long sediment-hosted gold belt (defined in this image by anomalous gold soil geochemistry). The total metal contour plots for Korkan-Bigar (Fig. 2) and Kraku Pestar (Fig. 4) have been superimposed on the sediment-hosted gold belt as defined to date.

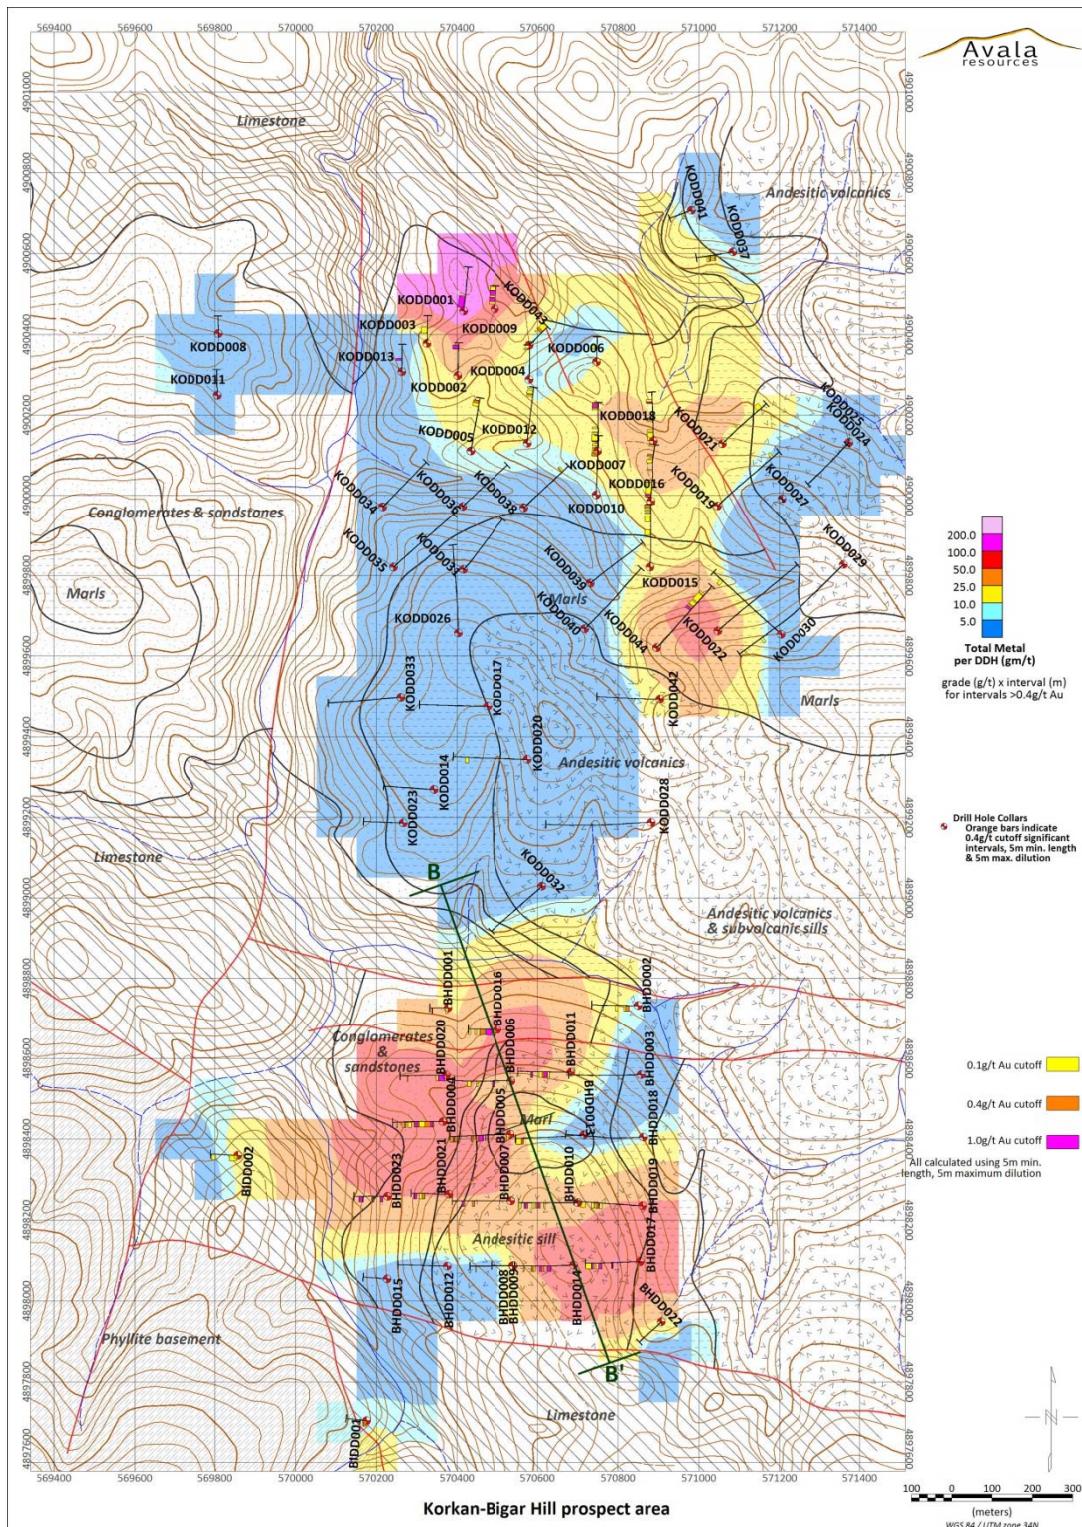

Figure 2: Gram-meter (intervals $>0.4\text{g/t Au} \times \text{thickness}$), total metal contour plot of all Korkan-Bigar drilling to date superimposed on a revised target area geology map. The section line B-B' relates to Figure 3.

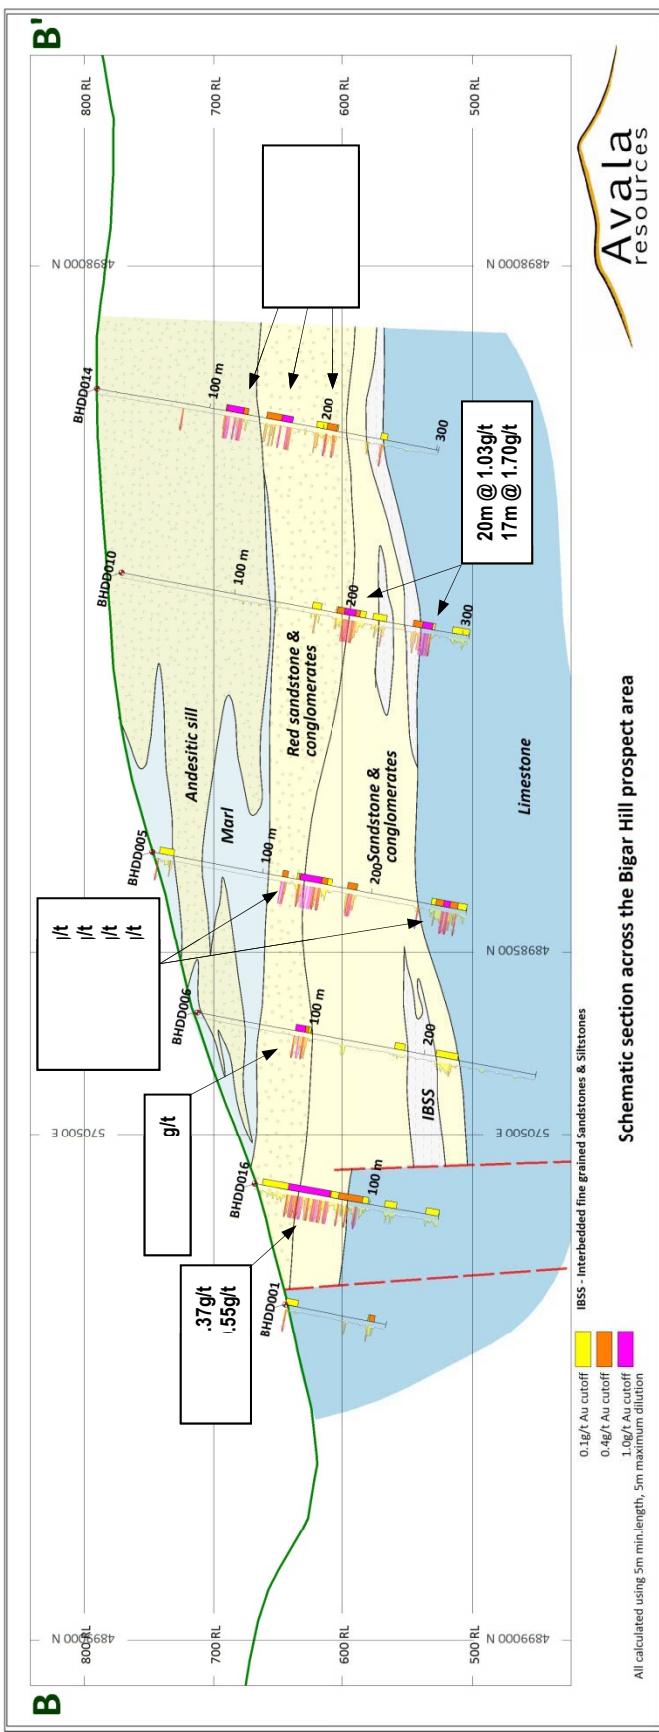

Figure 3: Oblique cross-section through the Bigar Hill area showing detailed stratigraphy and gold mineralized drill intersections to date (0.4g/t Au cut off). The section is looking approximately east-northeast.

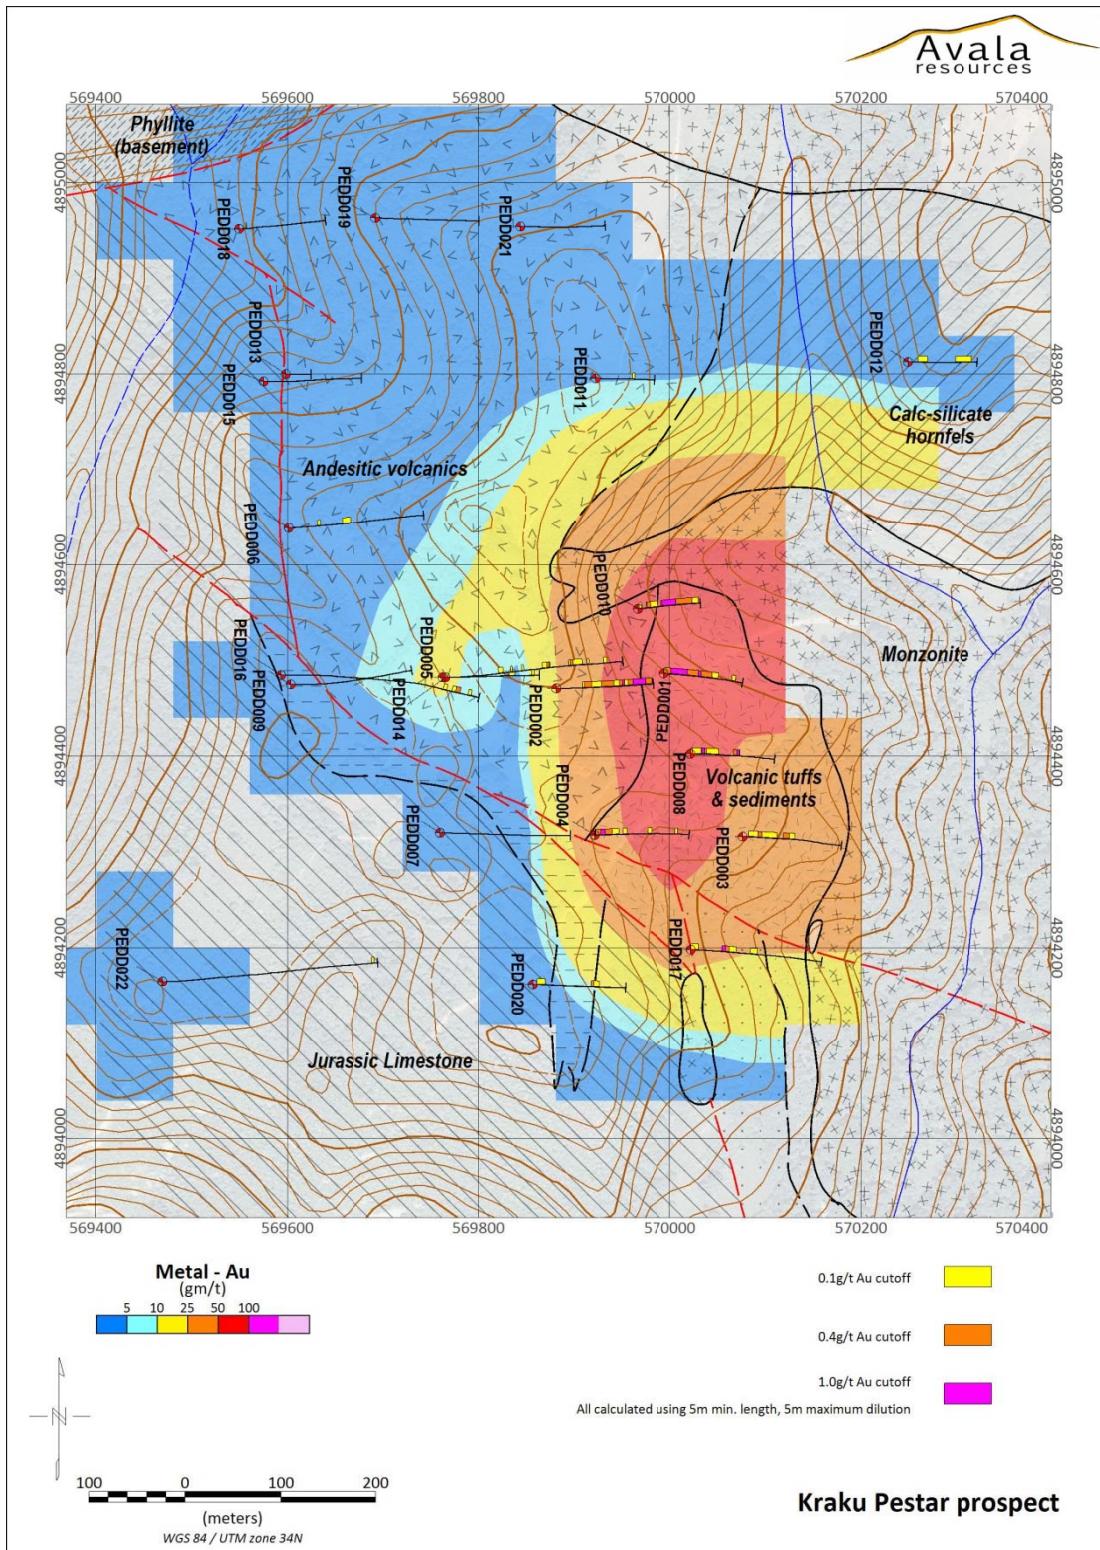

Figure 4: Gram-meter (intervals $>0.4\text{g/t Au} \times \text{thickness}$), total metal contour plot of all Kraku Pestar drilling to date superimposed on the target area geology map.

Table 1: All Bigar Hill gold drill intercepts at various cut-off grades.

- Results in bold previously not released
- Diamond drill samples are generally taken on a 1m basis and weigh ~3kg.
- Assay method: Fire assay Au (50g).
- Intercept widths do not necessarily represent true width.
- No top cut applied.

Table 3: All Kraku Pestar gold drill intercepts at various cut-off grades.

DRILLING SIGNIFICANT INTERVALS
