

Figure 1: Location of the Korkan-Bigar trend and the Kraku Pestar target area within the greater sediment-hosted gold belt, as defined in this image by mapped 'target stratigraphy' (yellow) and anomalous gold soil geochemistry within the Korkan-Bigar trend *only*. The total metal contour plots for Korkan, Bigar Hill and Kraku Pestar have been superimposed on the sediment-hosted gold belt, as defined to date by drilling.

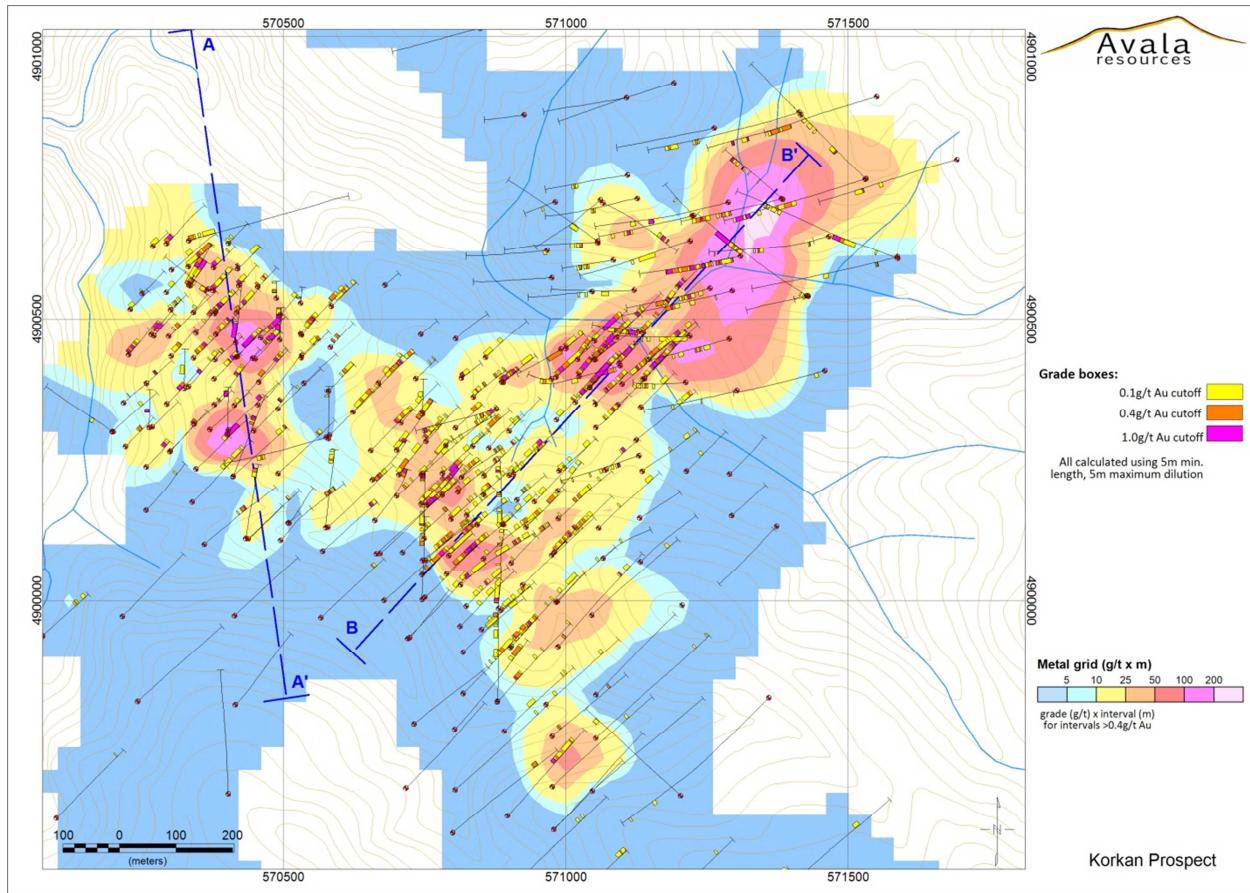

Figure 2: Final Gram-meter (intervals $>0.4\text{g/t Au} \times \text{thickness}$) plot following the completion of initial Korkan resource definition drilling program, total metal contour plot of all drilling to date superimposed on topography. The section lines A-A' and B-B' relates to Figure 3.

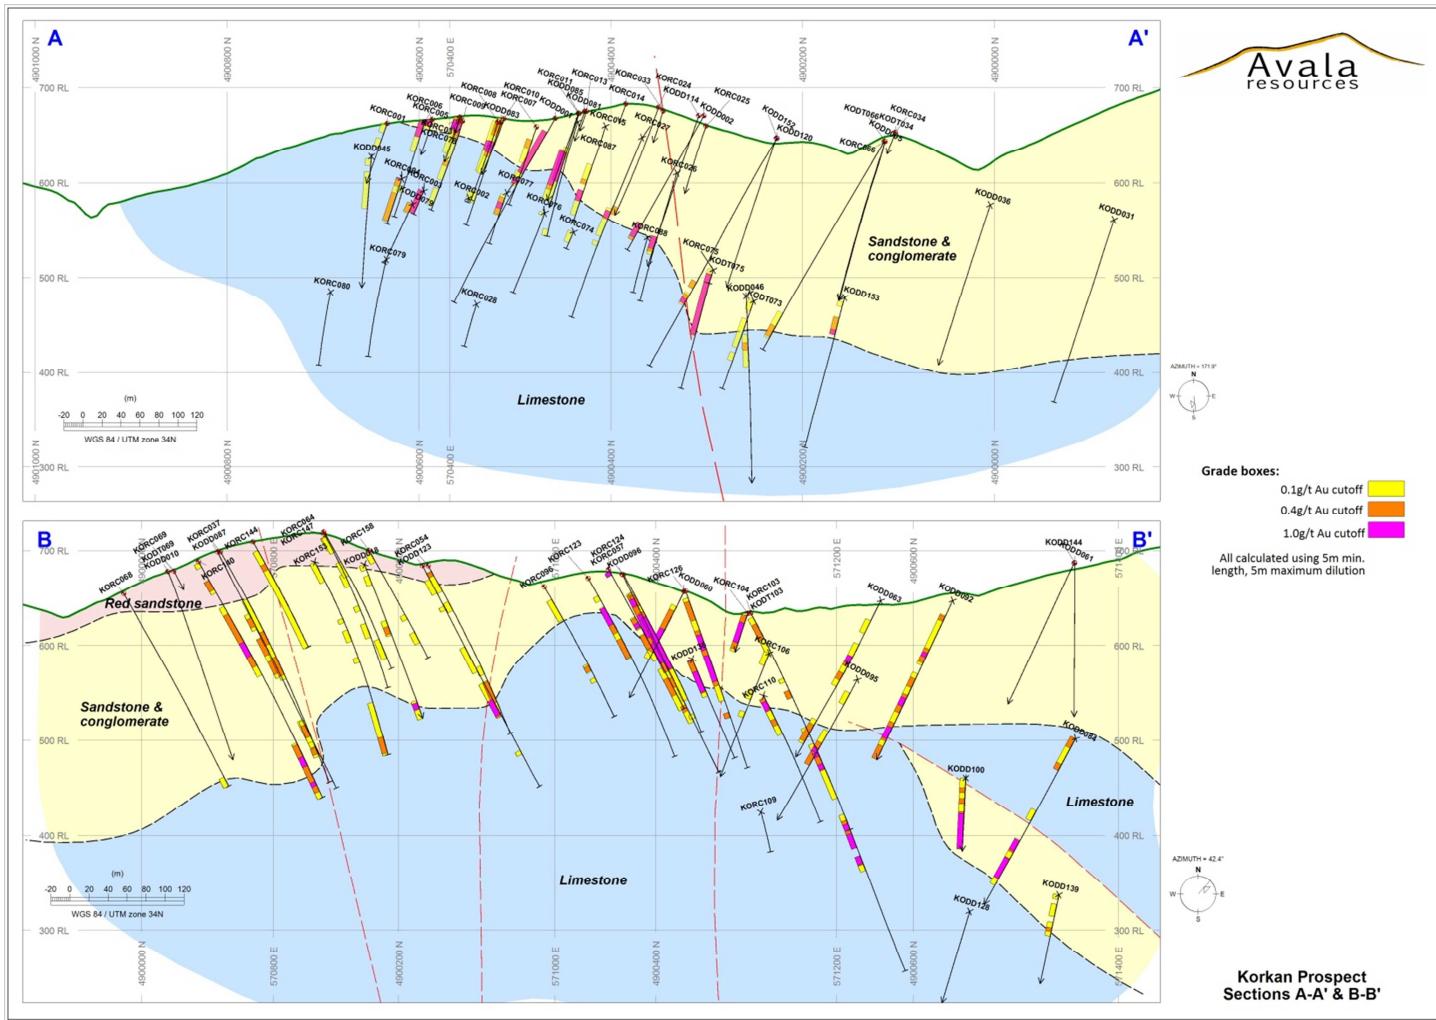

Figure 3: Cross-sections through the Korkan target area showing detailed stratigraphy and gold mineralized drill intersections to date. The A-A' section is looking east and the B-B' section is looking northwest.

Table 1: All Korkan drill intercepts at a 0.4g/t Au cut-off grade.

- Significant intervals 'not in bold' have been previously released.
- Diamond drill samples are generally taken on a 1m basis and weigh ~3kg.
- Reverse circulation drill samples are taken on a 1m basis and weigh ~5kg.
- Assay method: Fire assay Au (50g).
- Intercept widths do not necessarily represent true width.
- No top cut applied.
- The prefix 'KODTxxx' represents a diamond tail of the corresponding RC drill hole number for drill hole completion.
- (*) denotes a nominal 40 meter by 40 meter infill drill hole.
- Refer to www.avalaresources.com for a full listing of significant intervals at various cut-off grades.
- Related twin drill hole 'pairs' for Korkan:
 - KORC003-KODD079
 - KORC008-KODD083
