

Figure 1: Drilling Completed at Lucero with significant intersections in drillholes LUC-020 and -021

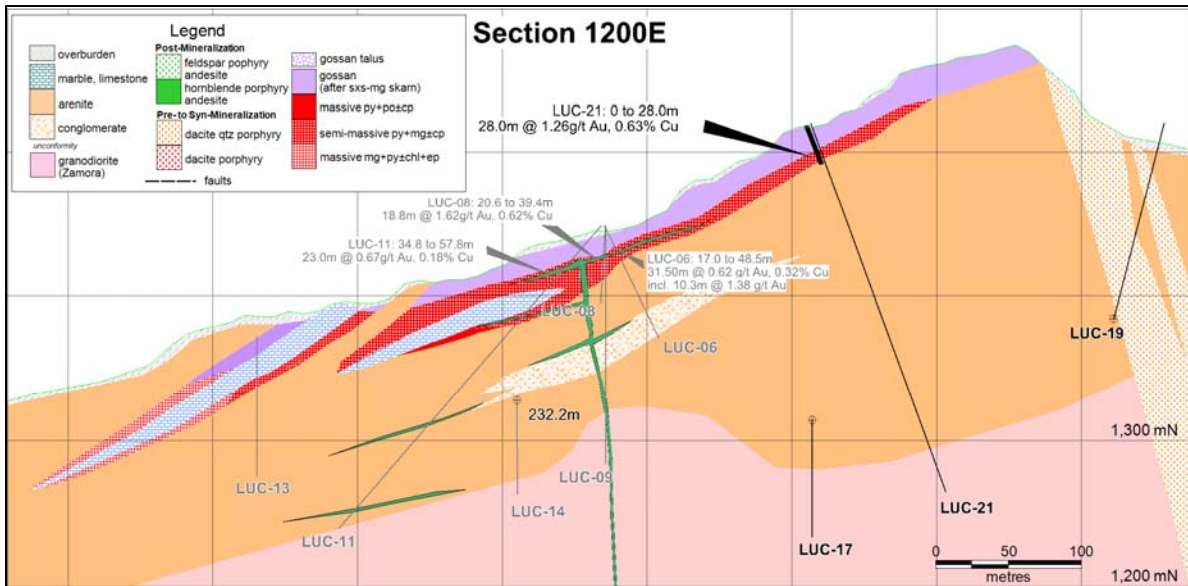

Figure 2: Section 1200 East including LUC-020 results

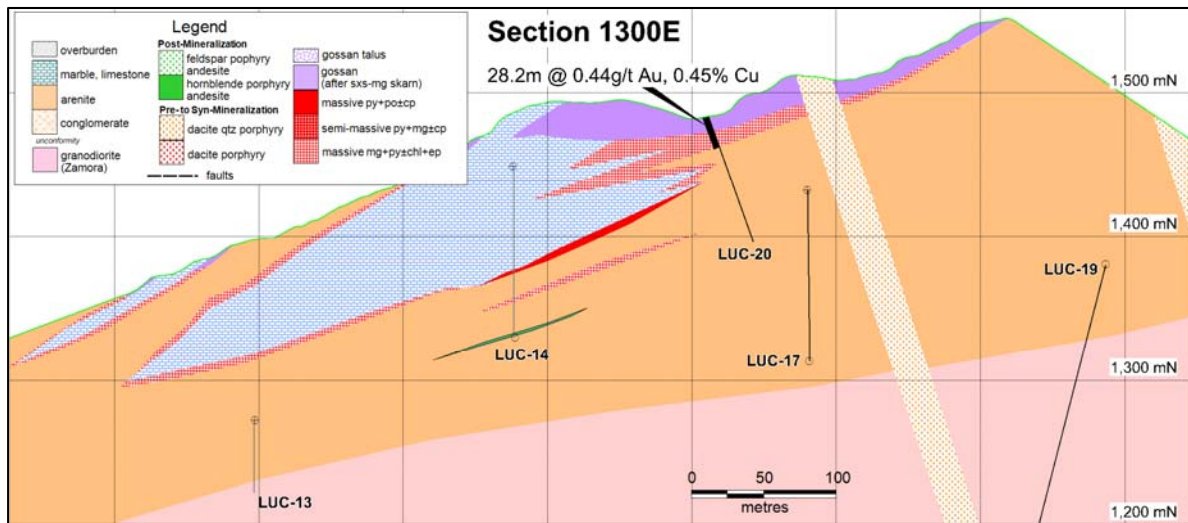

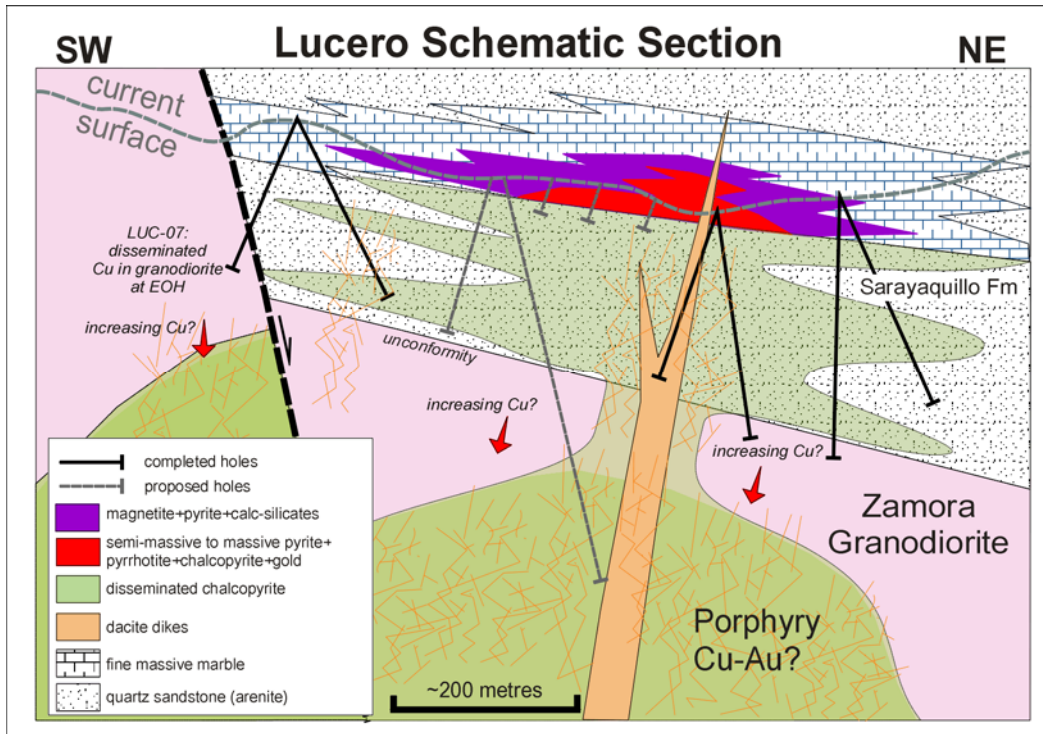

Figure 3: Section 1300 East including LUC-021 results

**Figure 4. Schematic deposit model for Lucero, illustrating the three targets at Lucero and their interrelationship. Skarn mineralization overlies broader disseminated copper-gold mineralization, which in turn overlies a more horizontally restricted, but potentially vertically more extensive and overall larger tonnage, porphyry copper-gold system.**
