

## **El Gallo Complex Development Photo Update**

**November 18, 2011**

**Preparation for haul road upgrading begins between the Palmarito and El Gallo deposit.**

**Haul road construction begins. To date, 300 meters of road has been constructed to the Lupita and Sagrado Corazon deposits. These two deposits are located 2 km south of the process plant.**

**Clearing the way for haul road construction to the Lupita and Sagrado Corazon deposits. Looking north towards the previously mined area.**

**Looking down on the gold recovery plant and process ponds.**

**Looking inside the gold recovery plant. The crane is in the process of removing older equipment that will not be used during El Gallo Phase 1 production.**

**Looking inside the gold recovery plant building. The crane is in the process of removing older equipment that will not be used during mining.**

**Dismantling of the old gold recovery plant equipment, now complete.**

**A community presentation announcing the company's current and future development plans including the 2 km road paving between the Palmarito and El Gallo deposits.**

**Local community members attend town gathering in support of US Gold's progress and construction activities.**

**“Ribbon Cutting” ceremony commemorating initial construction of the haul road between the Palmarito and the El Gallo deposits.**

**The first of three new 100 tonne Terex haul trucks being delivered to the El Gallo Complex.**

Haul truck assembly.
