

Figure 1: Sela Creek licence area and priority exploration targets recognised to date.

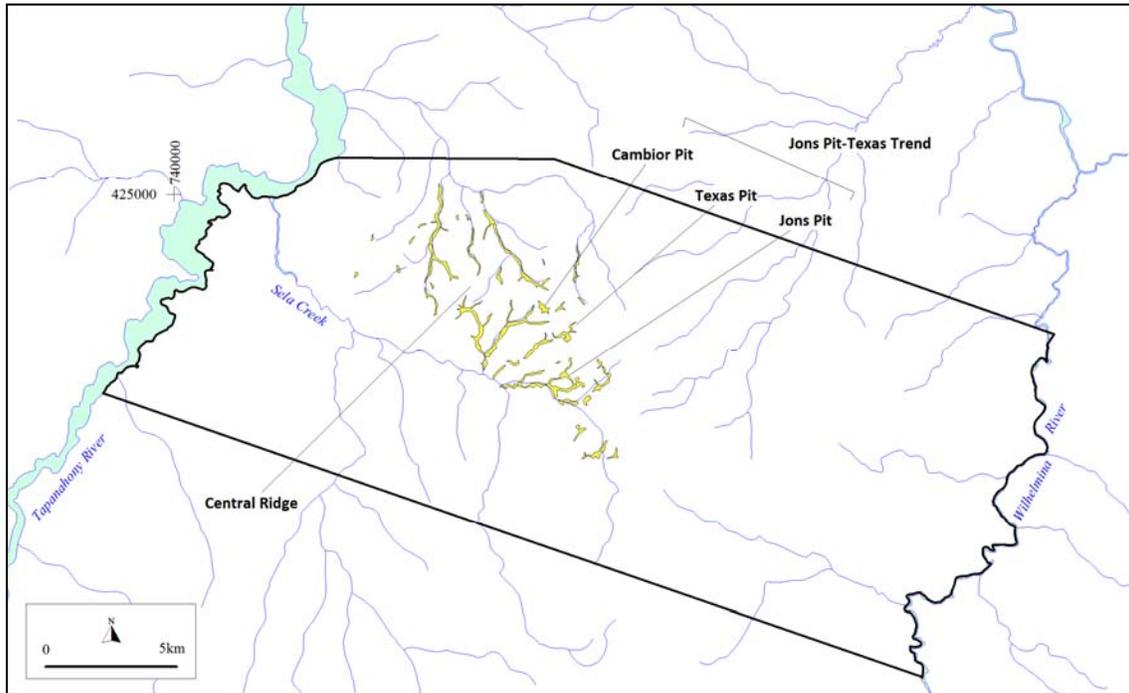

Figure 2: Aerial view of Cambior Pit, facing southwest. Note narrow linear pits which have exploited quartz veins are at the centre of alluvial gold fields. Pits are flooded.

Figure 3: Aerial view of Jons Pit facing southeast along strike of numerous pits along a strike length of 1.3 kilometres. Note the alluvial gold fields either side of the ridge on which the pits are located.

Figure 4: Aerial view of Jons Pit facing northwest. Note three sub parallel pits over a total width of 100 metres. Pits have exploited iron oxide stained shear zones and sub vertical, deformed quartz veins hosted in greenstone facies metasedimentary rocks.
