

*Diagram (UTM grid lines are at 250m intervals) showing the location of drill holes within Zone B. The holes have been drilled primarily to the west (Intrepid-IMN drilling), with a few to the northeast and southwest (Placer drilling). Hole dips are mostly -60 degrees, though they vary from -45 to -80 degrees (see section below).*

*Drilling at Zone B for the oxide resource estimate comprised 45 diamond drill holes completed by Intrepid Mines and JV partner PT Indo Multi Niaga during 2008/9. Zone B also includes historical hole GTD005 drilled by Golden Valley Mines, and GTD006, GTD007, GTD013A and GTD013B drilled by Golden Valley Mines in JV with Placer Dome.*
