Table 1. Gold grades of initial surface rock sampling, Jupiter, Indus, and Juno targets. Mineralized samples above a 0.50 g/t Au cut-off grade are reported. A total of 284 samples were collected over the targets. Assay values for samples not reported here range between below detection limit (0.005 g/t Au) to 0.50 g/t Au. These samples were neither part of, nor alone do they constitute, a statistically representative sampling program.
