

Figure 5 – Long Section of Accori North B and Accori North C Targets

A provisional long section of the principal structures at Accori North B and Accori North C shows the distribution of grade-thickness values (the product of the width of the mineralized interval and its U₃O₈ grade in %) on a vertical projection of the structure. The coloured circles demarcate the pierce points on the structure. A pierce point is the approximate location at which each bore hole intersects the structure.
