

## APPENDIX

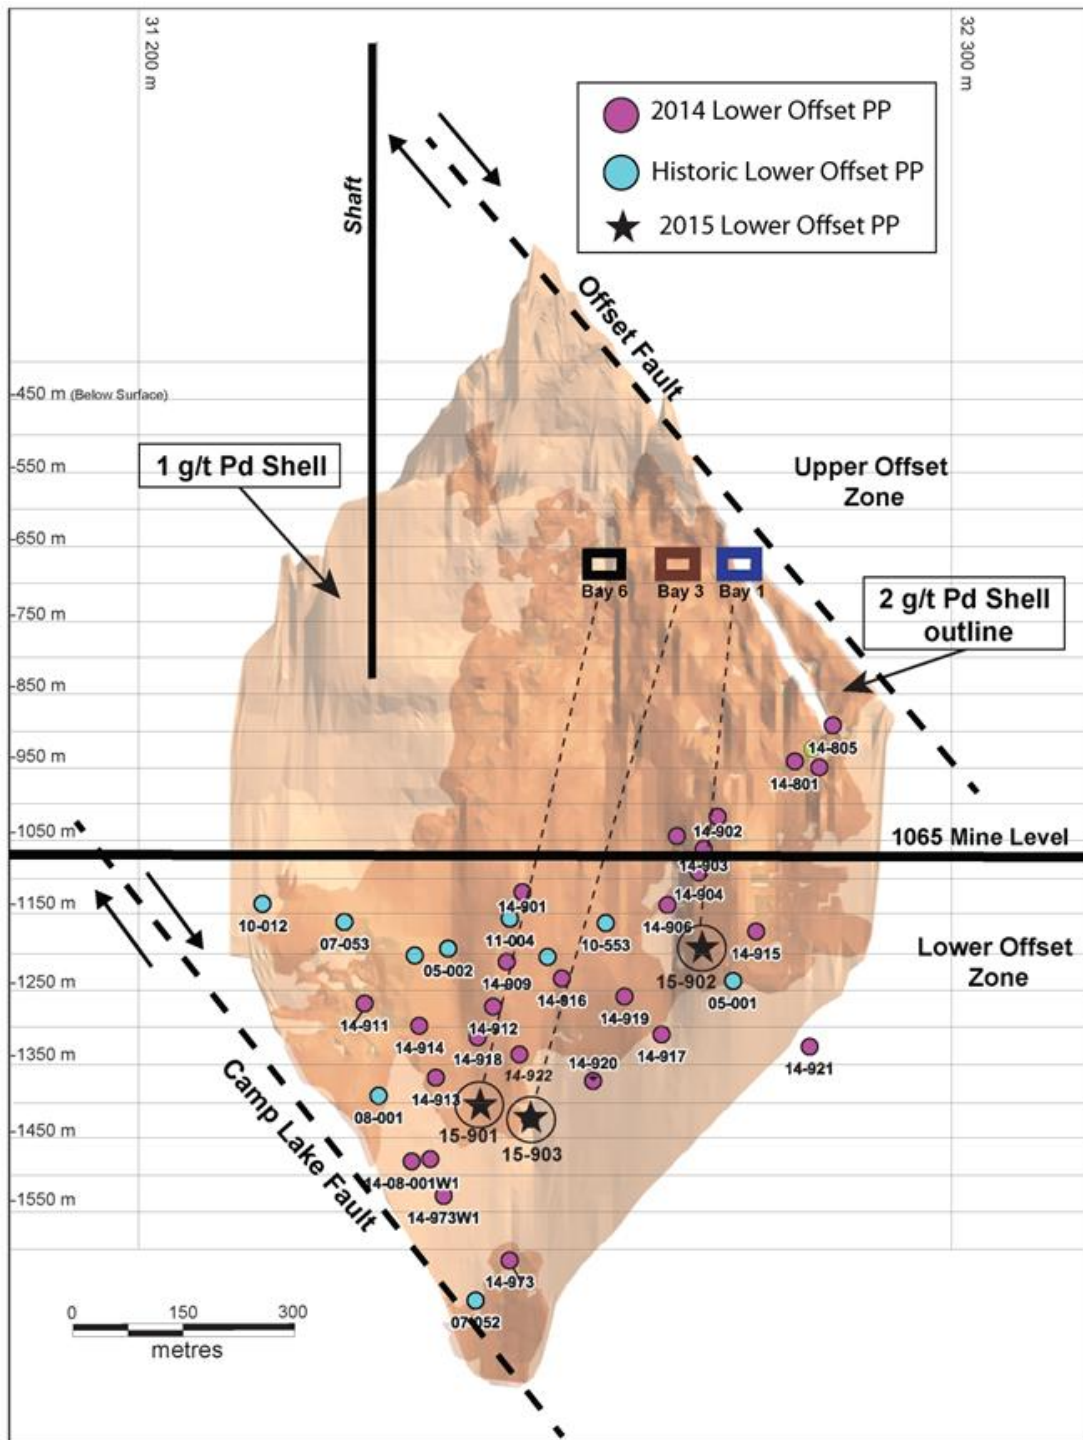

**Table 3:** Extended drilling highlights from the fourth quarter of 2014. Average grades reported are weighted by individual sample core lengths. Interval assays represent measured core lengths. True widths are estimated to represent between 30-70% of the reported core lengths.

TARGET	HOLE #	FROM (m)	TO (m)	LENGTH (m)	Pd (g/t)	Pt (g/t)	Au (g/t)	Ni (%)	Cu (%)

**Figure 1.** Longitudinal projection looking west and showing the approximate position of drilling pierce points (PP) for drill holes completed in 2014 and historical drill holes that intersect the Lower Offset Zone. Also shown are the initial three holes planned for the 2015 program. Reference images include preliminary, revised palladium grade shells (1 and 2 g/t Pd) based on drilling data available at the end of 2014.

**Figure 2.** Geological map showing the general outline for the higher-grade part of the recently delineated Powerline Zone located to the south of the largely mined out Twilight Zone and adjacent to the southeastern edge of the Roby open pit. Also shown are the collar locations for the 2013 and 2014 surface diamond drill holes that tested a 200 meter long segment of the Sheriff North Zone.
