Newly reported holes highlighted in yellow. All true widths are uncertain due to limited drilling to date but are expected to be 30-90% of reported widths unless otherwise stated.

All intervals of no sampling have been assigned zero grade for the purposes of compositing.

NSV means No Significant Values (< 0.3 g/t gold).

Composites were calculated at 0.3, 3.0, 10.0 g/t gold cut-offs. Ag and Cu values are weighted averages corresponding to reported gold intervals.

**Note:** For KCD-50 and subsequent holes, criteria for inclusion in a mineralized interval have been changed slightly as noted below, to reflect a change to operation entirely in metric units:
