

Figure 1. Location of the Mitzic license in relation to the main iron deposits in Central Africa. Three deposits >650Mt are currently under development in the region.

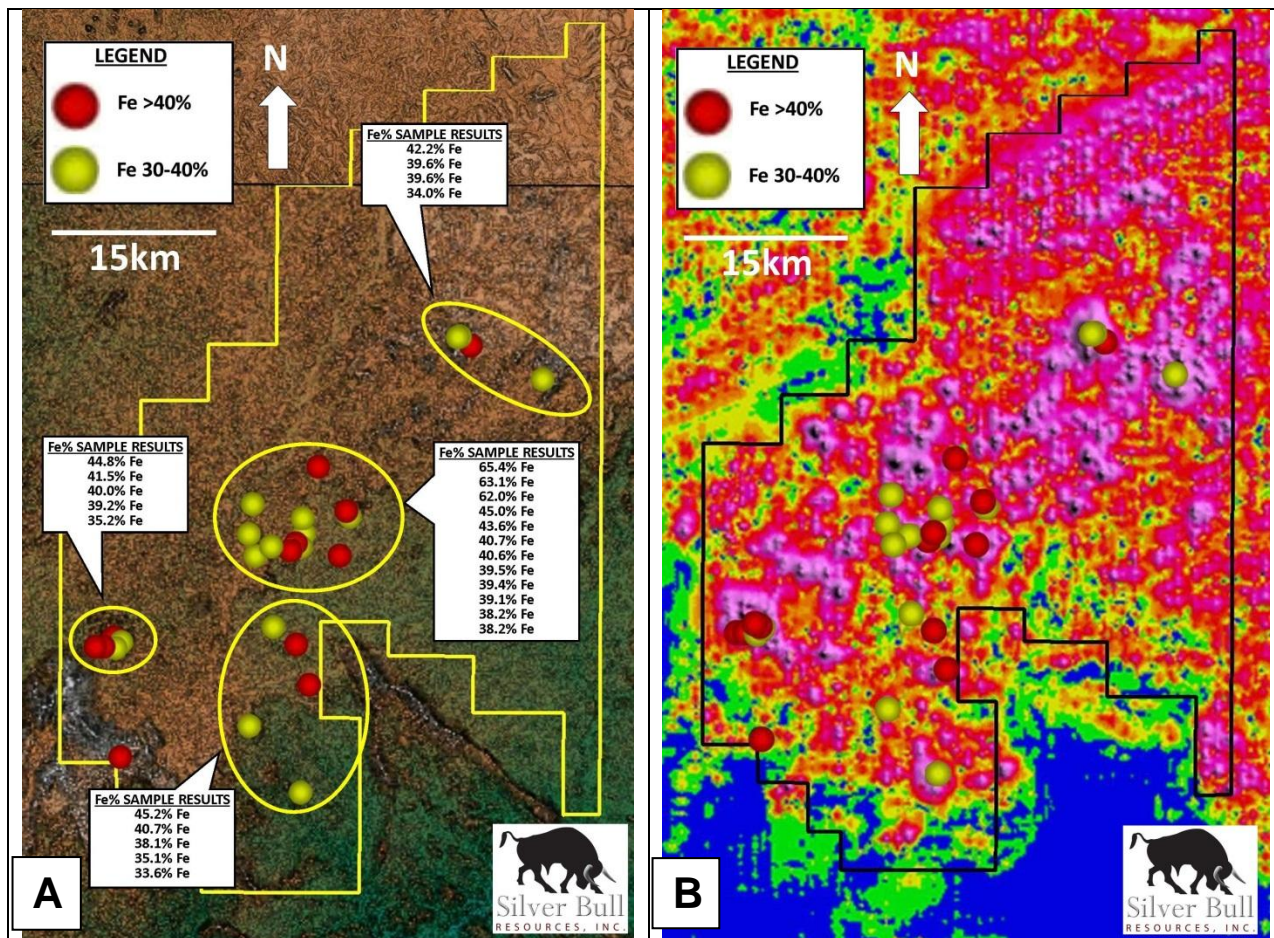

Figure 2. Results from the sampling program >30% Fe shown in map "A" from the regional reconnaissance sampling program on the Mitzi license. The same samples set against the regional magnetic map shown in Map "B" on the Mitzi license. There are over 70km of magnetic highs in the area which correspond to topographic highs.
