

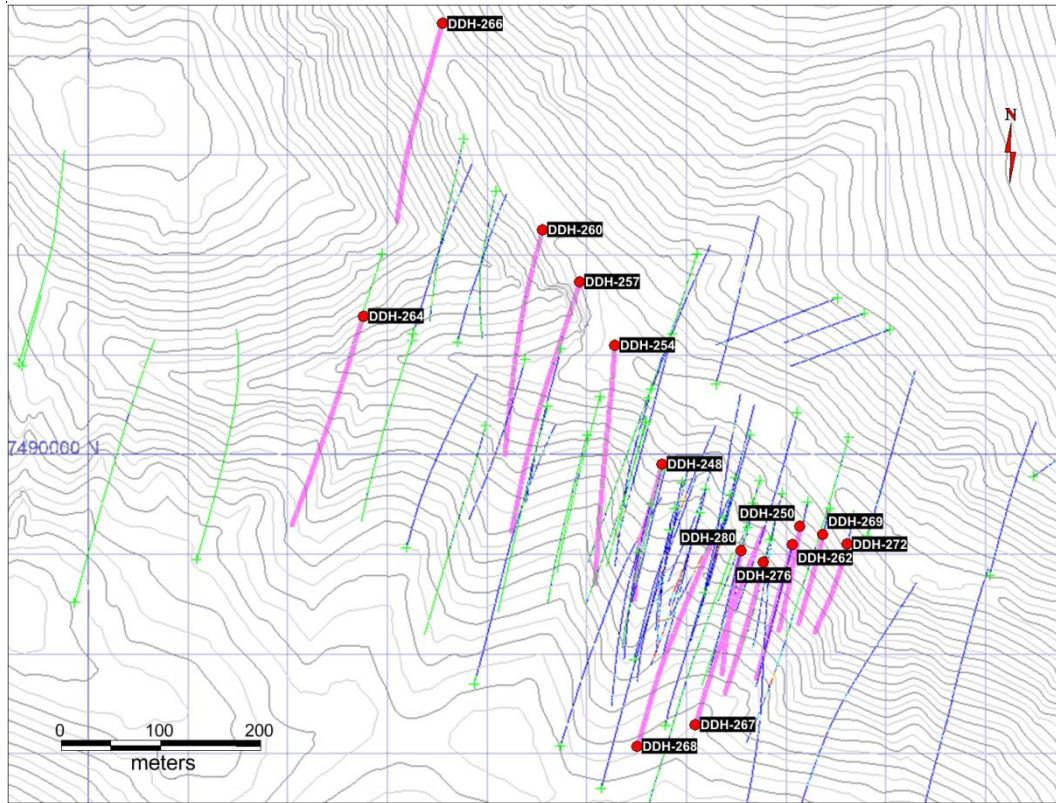

Figure 1: Plan map of the Cortaderas Target Area on the Pirquitas Mine Property

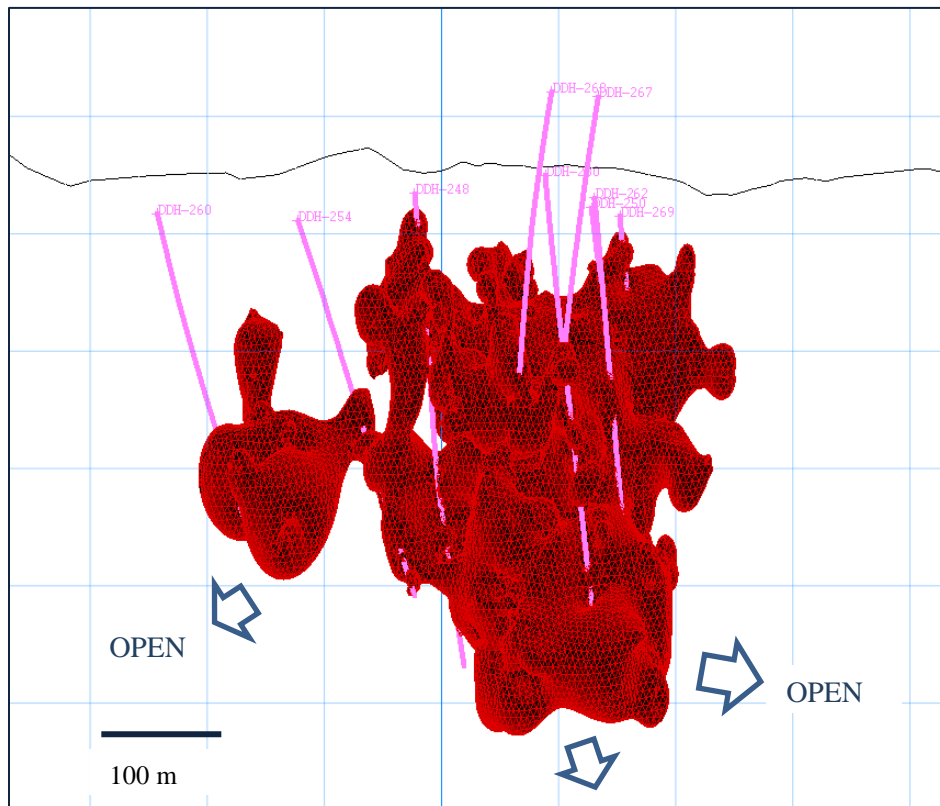

Source: Silver Standard

Notes:

1. The center of the map area is located approximately 500 metres north of the San Miguel open-pit mine. Traces of the drill holes are vertically projected onto the contoured topographic surface. Assay results for the numbered drill holes (magenta lines) are presented in Table 1.
2. Prepared by Qualified Person (QP) Carl Edmunds P.Ge., Chief Geologist for Silver Standard, as detailed below in this news release.

Figure 2: Interpreted Volume of the Cortaderas Breccia Mineralized Body

Source: Silver Standard

Notes:

1. The interpreted volume of the Cortaderas Breccia mineralized body is based on drill hole intersections containing silver-bearing sulphide mineralization (including drill holes reported in Table 1 (magenta lines). View is to the north. Collars of drill holes DDH-267 and DDH-268 are located to the south of the section plane and up slope.
2. Prepared by Qualified Person (QP) Carl Edmunds P.Geol., Chief Geologist for Silver Standard, as detailed below in this news release.
