

Figure 2 – Long Section of the Accori North C Structure

A provisional long section of the Accori North C structure shows the distribution of grade-thickness values (the product of the width of the mineralized interval and its U₃O₈ grade in %) on a vertical projection of the structure. The coloured circles demarcate the pierce points on the structure. A pierce point is the approximate location at which each bore hole intersects the structure. The additional 15 bore holes, whose grades are reported in this release, are labelled in red.
