

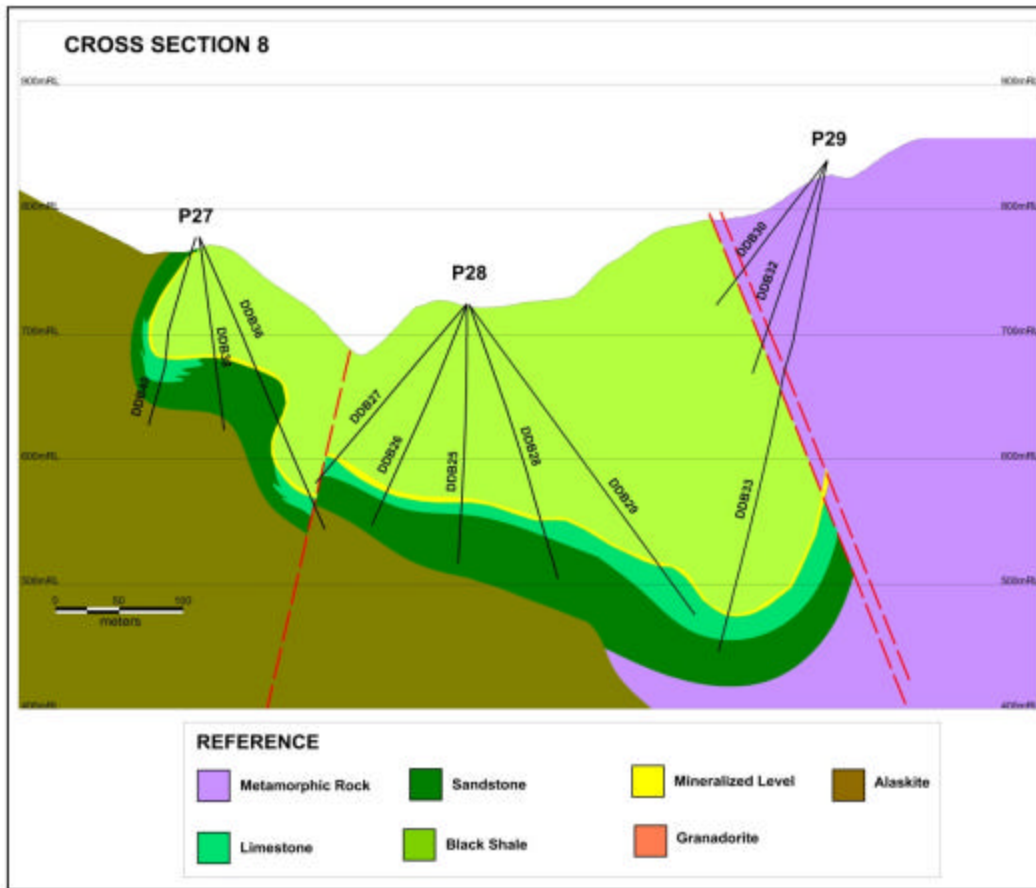

Figure 4 – Cross Section 8

This figure shows the cross section through the fold in the Berlin Project at the location of drill platforms P27, P28 and P29. The mineralized unit is marked in yellow. The location of this vertical section is shown as a black line through platforms P27, P28 and P29 in Figure 2. Note that the fault in red removes part of the mineralized layer, creating a window in which there is no mineralization in part of the east flank of the fold as illustrated in plan view in Figure 6.
