

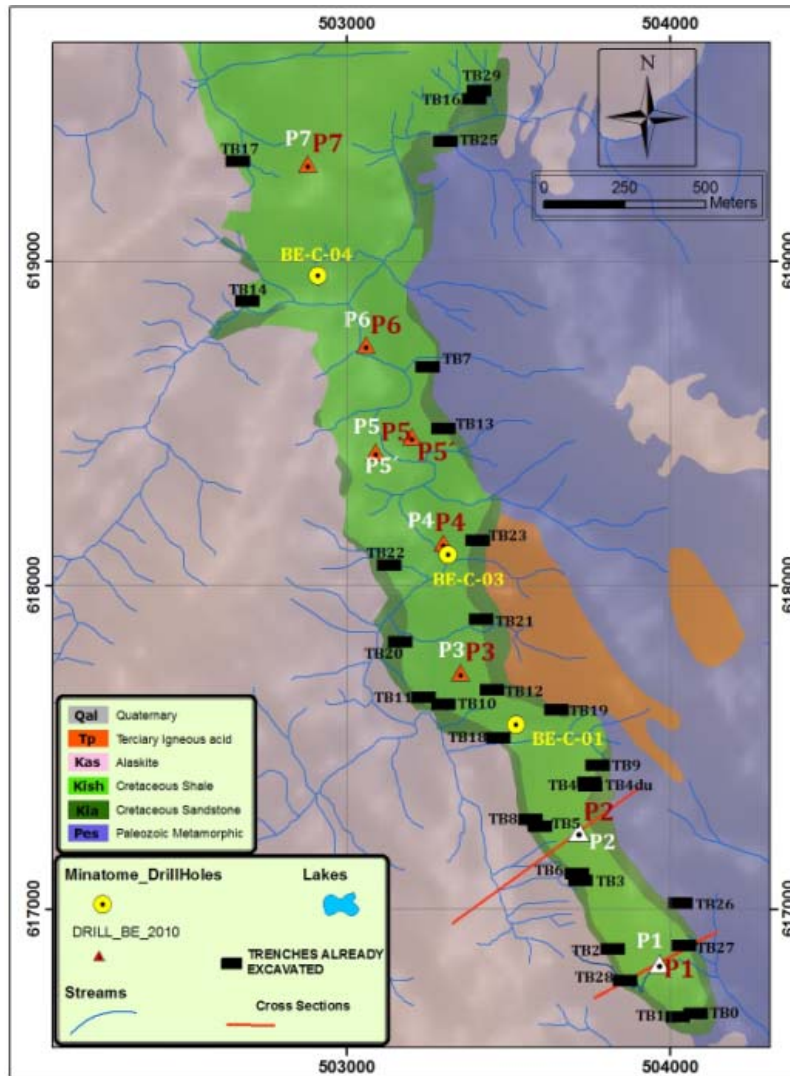

Figure 2 – Drill Locations in the Southern Part of the Fold in the Berlin Project, Colombia

Geological map of the southernmost 3km of the 10.5km long syncline in the Berlin Project. The triangles mark the location of U308 Corp’s drill platforms. The six bore holes completed to date whose assay results are reported in this press release (Table 1) were drilled from platforms P1 and P2 (shown in white). The yellow circles mark the location of historic drill holes. The orange lines through drill platforms P1 and P2 show the location of the vertical sections shown in Figure 3.
