

Figure 2. Predictive modeling from the Detailed Targeting Program showing the association between known gold occurrences and gold bearing shears and structural domains. North is towards top of the map. Dimensions are 10 km E-W and 6 km N-S. There are currently 9 identified E-W trending gold bearing shears and 3 major E-W structural domains of unknown extent at this time. Several higher grade gold zones appear at junctions of NW-SE, NE-SW and E-W shears; but at this time there is yet to be a link made between the gold mineralization and the junctions.
