

Figure 2. The Slivovo mineralization zone runs on the surface for over 1,000 meters along an ENE-trending corridor from the epithermal target (**olive**) to the SW gossan extension (**orange**) to the Pester sulfide-oxide gossan (**black**). The epithermal zone now runs for over 800 meters, north-south. Drilling started in the Pester gossan area and moved to the SW extension zone, where SLV008 is underway.
