Diorite boulders strongly mineralized in copper

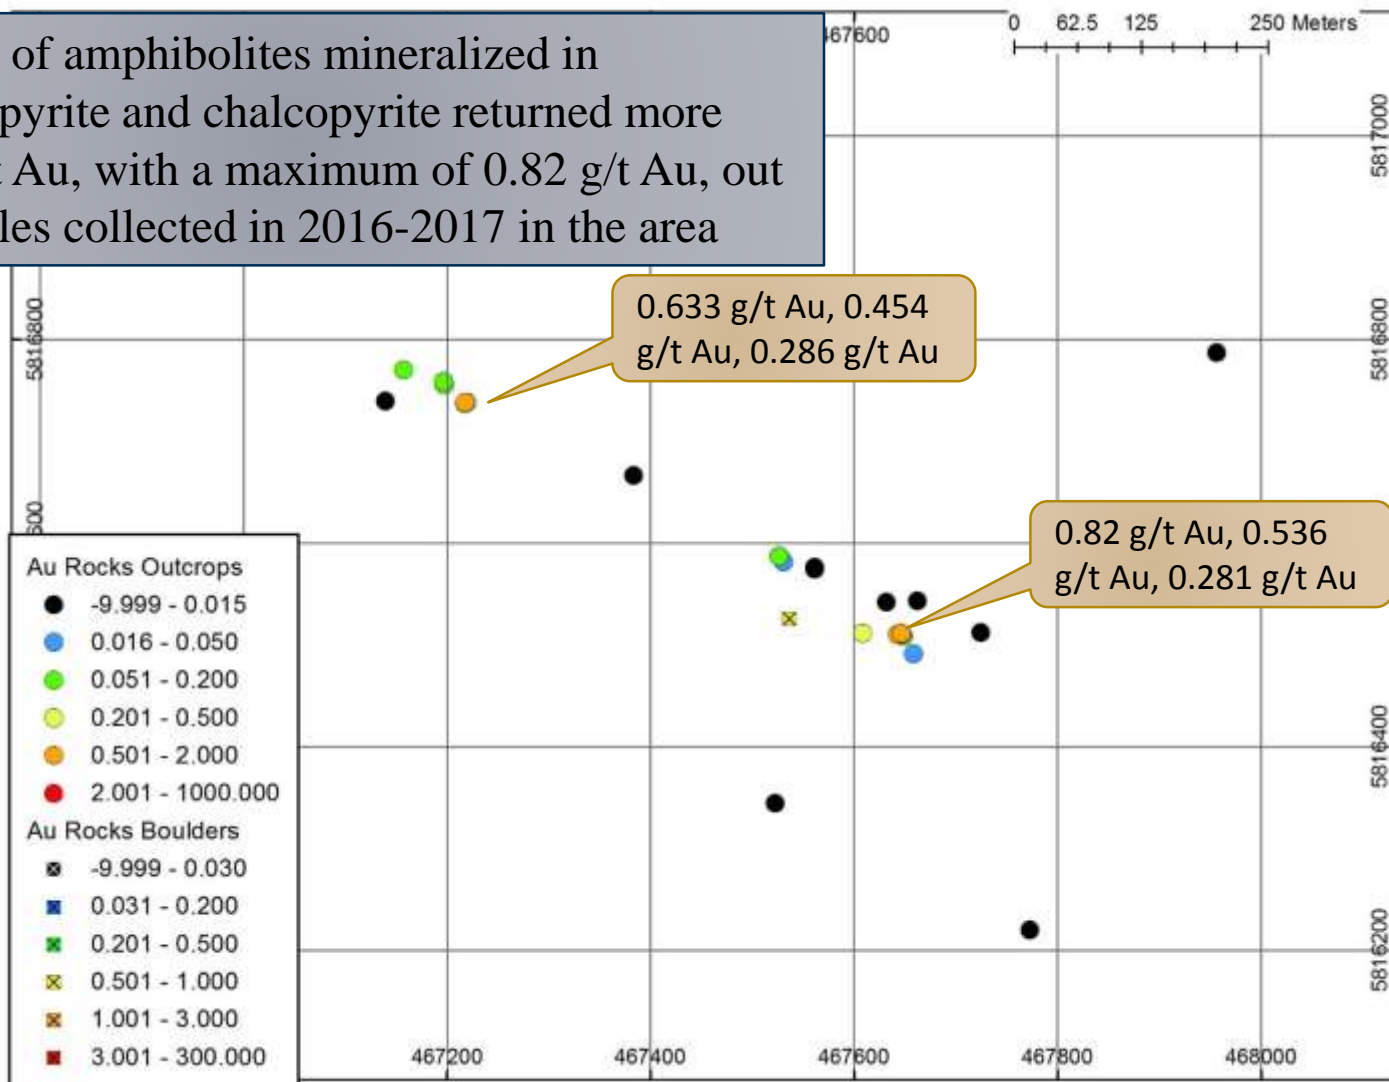

Diorite boulders strongly mineralized in copper

Example of a diorite boulder strongly mineralized in disseminated chalcopyrite that returned **4.54% Cu, 5.1 g/t Ag**

Anomalous Gold in amphibolites

12 samples of amphibolites mineralized in pyrrhotite, pyrite and chalcopyrite returned more than 0.1 g/t Au, with a maximum of 0.82 g/t Au, out of 25 samples collected in 2016-2017 in the area

Anomalous Gold in amphibolites

Samples 444414 and 444416 on this outcrop respectively returned **0.82** and **0.536 g/t Au**. Strong calcsilicate alteration and silicification

Anomalous Gold in amphibolites

Sample 444416 and 444423 respectively returned **0.536** and **0.244 g/t Au** in silicified amphibolites/basalts carrying 5-7% PO disseminated.
